ABSTRACT

The quide contains six sections, each consisting of one or more units of general mechanical trades instruction. The sections cover: safety and tools, measuring and blueprint reading, gas welding, arc welding, small engines, and metal work. Each unit includes performance objectives stated as terminal objectives, indicating the subject matter to be covered, and as specific objectives for student performance. All units contain suggested student and teacher activities, information sheets providing the essential content of the unit, tests with answers, and a reference list. Many of the units also have transparency masters, job sheets designed to teach a skill, and assignment sheets to provide paper and pencil activities. Numerous illustrations are included on the assignment and job sheets, tests, and transparency masters. (MS)

********** * Documents acquired by ERIC include many informal unpublished * materials not available from other sources. ERIC makes every effort * to obtain the best copy available. Nevertheless, items of marginal * reproducibility are often encountered and this affects the quality * * of the microfiche and hardcopy reproductions ERIC makes available * via the ERIC Document Reproduction Service (EDRS). EDRS is not * responsible for the quality of the original document. Reproductions * * supplied by EDNS are the best that can be made from the original.

USE OF THIS PUBLICATION

Instructional Units

General Mechanical Trades curriculum includes six areas. Each area consists of one or more units of instruction. Each instructional unit includes behavioral objectives, suggested activities for teacher and students, information sheets, assignment sheets, job sheets, visual aids, tests, and answers to the test. Units are planned for more than one lesson or class period of instruction.

Careful study of each instructional unit by the teacher will help him determine:

- A. The amount of material that can be covered in each class period.
- B. The skills which must be demonstrated.
 - 1. Supplies needed
 - 2. Equipment needed
 - 3. Amount of practice needed
 - 4. Amount of class time needed for demonstrations
- C. Supplementary materials such as pamphlets and filmstrips that must be ordered.
- D. Resource people that must be contacted.

Objectives

Each unit of instruction is based on behavioral objectives. These objectives state the goals of the course thus providing a sense of direction and accomplishment for the student.

Behavioral objectives are stated in two forms. Terminal Objectives stating the subject matter to be covered in a unit of instruction; Specific Objectives stating the student performance necessary to reach the terminal objective.

Since the objectives of the unit provide direction for the teaching-learning process, it is important for the teacher and students to have a common understanding of the intent of the objectives. A limited number of performance terms have been used in the objectives for this curriculum to assist in promoting the effectiveness of the communication among all individuals using the materials.

Following is a list of performance terms and their synonyms which were used in this material:

Describe Name Identify Define Select Label Discuss in writing List in writing Mark Discuss orally List orally Point out Interpret Letter Pick out Tell how Choose Record Tell what Repeat Locate Explain Give

Replace
Turn off/on
(Dis) assemble
(Dis) connect

Reading of the objectives by the student should be followed by a class discussion to answer any questions concerning performance requirements for each instructional unit.

Teachers should feel free to add objectives which will fit the material to the needs of his students and community. When a teacher adds objectives, he should remember to supply the needed information, assignment and/or job sheets, and criterion tests.

Suggested Activities

Each unit of instruction has a Suggested Activities sheet outlining steps to follow in accomplishing specific objectives. The activities are listed according to whether they are the responsibility of the instructor or the student.

Instructor: Duties of the instructor will vary according to the particular unit, however, for best use of the material they should include the following: provide students with objective sheet, information sheets, assignment sheets, and job sheets; preview filmstrips, make transparencies, and arrange for resource materials and people, discuss terminal and specific objectives and information sheets; give test. Teachers are encouraged to use any additional instructional activities and teaching methods to aid students in accomplishing the objectives.

Students: Student activities are listed which will help the student to achieve the objectives for the unit.

Information Sheets

Information sheets provide content essential for meeting the cognitive (knowledge) objectives of the unit. The teacher will find that information sheets serve as an excellent guide for presenting the background knowledges necessary to develop the skills specified in the terminal objective.

Students should read the information sheets before the information is discussed in class. Students may take additional notes on the information sheets.

Transparency Masters

Transparency masters provide information in a special way. The students may see as well as hear the material being presented, thus reinforcing the learning process. Transparencies may present new information or they may reinforce information presented in the information sheets. They are particularly effective for such activities as learning and locating the parts of a machine.

Transparencies should be made and placed in the notebook where they will be immediately available for use. Transparencies direct the class's attention to the topic of discussion. They should be left on the screen only when topics shown are under discussion. (NOTE. Stand away from the overhead projector when discussing transparency material. The noise of the projector may cause the teacher to speak too loudly.)

Job Sheets

Job sheets are an important segment of each unit. The instructor should be able to and in most situations should demonstrate the skills outlined in the job sheets. Procedures outlined in the job sheets give direction to the skill being taught and allow both student and teacher to check student progress toward the accomplishment of the skill. Job sheets provide a ready outline for a student to follow if he has missed a demonstration. Job sheets also furnish potential employers with a picture of the skills being taught and the performances he might reasonably expect from a person who has had this training.

Assignment Sheets

Assignment sheets give direction to study and furnish practice for paper and pencil activities to develop the knowledges which are necessary prerequisites to skill development. These may be given to the student for completion in class or used for homework assignments. Answer sheets are provided which may be used by the student and/or teacher for checking student progress.

Test and Evaluation

Paper-pencil and performance tests have been constructed to measure student achievement of each objective listed in the unit of instruction. Individual test items may be pulled out and used as a short test to determine student achievement of a particular objective. This kind of testing may be used as a daily quiz and will help the teacher spot difficulties being encountered by students in their efforts to accomplish the terminal objective. Test items for objectives added by the teacher should be constructed and added to the test. Progress sheets are provided for student and teacher to record acceptable performance of skills outlined in job sheets.

Test Answers

Test answers are provided for each unit. These may be used by the teacher and/or student for checking student achievement of the objectives.

IX

SAFETY UNIT I

TERMINAL OBJECTIVE

After completion of this unit of instruction, the student should be able to select rules for shop and personal safety and complete a safety inspection checklist. He should be able to select the correct fire extinguisher for the classes of fire and match the safety color code with statements of its use. The student should be willing to sign the safety pledge form and make at least ninety percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match three terms with their definitions.
- 2. Match the six colors of the safety code with statements of their uses.
- 3. Select from a list rules for personal safety.
- 4. Select from a list rules for general shop safety.
- 5. Select from a list those steps that are necessary to maintain a clean and orderly shop.
- 6. Match the four classes of fire with statements defining each class.
- 7. Select from a list of fire extinguishers the types best suited to extinguish each class of fire.
- 8. Complete a National Standard School Shop Safety Inspection check list.
- 9. Indicate a willingness to work safely by subscribing to the student safety pledge form.

SAFETY UNIT I

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information sheet, safety pledge form, and National Standard School Shop Safety Inspection check list.
- C. Make transparency.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Give test.

II. Student:

- A. Read objective sheet.
- B. Study information sheet.

- C. Complete the National Standard School Shop Safety Inspection check list.
- D. Complete the safety pledge form.
- E. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objective sheet
- B. Information sheet
- C. Transparency master--TM 1--Types of Fire Extinguishers
- D. Safety Pledge
- E. Standard School Shop Safety Inspection Check List
- F. Test
- G. Answers to test

II. References:

- A. The ABC's of Fire Protection. Kidde Portable Extinguishers, Walter Kidde and Company, Inc., Belleville, New Jersey 07109.
- B. An Accident Prevention Program for School Shops and Laboratories. U.S. Department of Health, Education, and Welfare, Office of Education.
- C. Safety Practices and Procedures in School Shops. Department of Education, Division of Vocational Education, State of New Jersey.

SAFETY UNIT I

INFORMATION SHEET

I. Terms and definitions

- A. Safety--The state or condition of being safe; freedom from danger, risk, or injury
- B. Accident Includes any suddenly occurring, unintentional event which causes injury or property damage
- C. First aid-The immediate, temporary care given the victim of an accident or sudden illness until the services of a physician can be obtained

II. Colors and applications of the safety color code

- A. Green-Applied to non-critical parts of equipment and machined surfaces, name plates, and bearing surfaces; designates the location of safety and first aid equipment
- B. Yellow-Applied to operating levers, wheels, handles, and hazardous areas which may cause stumbling, falling, or tripping; designates caution
- C. Orange-Applied to electrical switches, interior surfaces of doors, on fuse and electrical power boxes, movable guards, and parts; designates dangerous parts of equipment which may cut, crush, shock, or otherwise injure
- D. Red--(Physical color associated with fire) Used to identify the location of fire fighting equipment
 - (NOTE: Emergency fire exits should be designated in red. Buttons or levers for electrical switches used for the stopping of machinery should be designated in red. Gasoline cans should be painted red with additional identification in the form of a yellow band around the can.)
- E. Blue--Used as the basic color for designating caution against starting equipment while it is being worked on, or against the use of defective equipment (A blue tag should be lettered "Out of Order.")
- F. Ivory--Used to reflect light and "show the way" when applied to label edges, vise jaws, and edges of tool rests

III. Personal safety rules

- A. Wear shop clothing appropriate to the instructional activity being performed
- B. Confine long hair before operating rotating equipment

- C. Always wear safety glasses; use suitable helmets and goggles for welding
- D. Remove ties when working around machine tools or rotating equipment
- E. Remove rings and other jewelry when working in the shop
- F. Participate in no horseplay, practical jokes, or running in the shop area
- G. Use soap and water frequently as a method of preventing skin diseases

IV. General shop safety rules

- A. Keep all hand tools sharp, clean, and in safe working order
- B. Report any defective tools, machines, or other equipment to the instructor
- C. Keep all guards and safety devices except with the specific authorization of the instructor
- D. Operate a hazardous machine only after receiving instruction on how to operate the machine safely
- E. Report all accidents to the instructor regardless of nature or severity
- F. Turn off the nower before leaving a machine tool
- G. Make sure in place and adjusted properly before starting a machine tool
- H. Disconnect the power from machine tools before performing the maintenance task of oiling or cleaning
- I. Use a solvent only after determining its properties, what kind of work it has to do, and how to use it
- J. Use correct properly fitting wrenches for nuts, bolts, and objects to be turned or held
- K. Keep the shop or laboratory floor clear of scraps and litter
- L. Clean up any spilled liquids immediately
- M. Oily rags or oily waste should be stored in metal containers
- N. Clean the chips from a machine with a brush--not with a rag or the bare hands

- V. Steps in maintaining a clean and orderly shop
 - A. Machinery and equipment arranged to permit safe efficient work practices and ease in cleaning
 - B. Materials and supplies safely stacked or stored in proper places
 - C. Tools and accessories safely stored in cabinets, on racks, or other suitable devices
 - D. Working areas and work benches clear and free of debris and other hazards,
 - E. Floors clean and free from obstructions and slippery substances
 - F. Aisles, traffic areas, and exits free of materials and other debris
 - G. Combustible materials properly disposed of or stored in approved containers
 - H. Oily rags stored in self-closing or spring-lid metal containers
 - I. Students working in the area instructed on the proper procedures to follow in keeping the area clean and orderly
 - J. Sufficient brooms, brushes, and other housekeeping equipment readily available

VI. Types of fires

- A. Class A--Fires that occur in ordinary combustible materials such as wood, rags, and rubbish
- B. Class B--Fires that occur with flammable liquids such as gasoline, oil, grease, paints, and thinners
- Class C--Fires that occur in or near electrical equipment such as motor switchboards, and electrical wiring
- Class D--Fires that occur in combustible metals such as magnesium, titanium, airconium, or lithium sodium
- VII. Types of fire extinguishers (Transparency 1)
 - A. Pressurized water--Operates usually by squeezing a handle or trigger; used on Class A fires
 - Soda acid-Operates by turning extinguisher upside down; used on Class A fires
 - (NOTE: Do not use water or soda acid extinguishers on any other type of fire.)

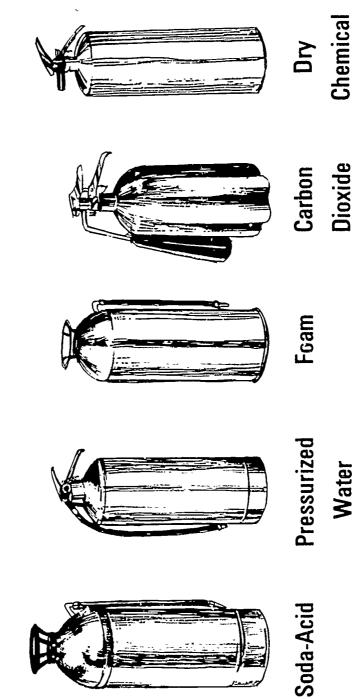

- C. Carbon dioxide (CO₂)--Operates usually by squeezing handle or trigger, or lever; used on Class B and C fires
- D. Dry chemical--Operates usually by squeezing a handle, trigger, or lever; used on Class B and C fires
- E. Foam--Operates by turning extinguisher upside down; used on Class A and B fires

(NOTE: Special techniques and extinguishing agents are necessary for Class D fires. If you use these materials, consult your fire marshal or fire department.)

Types of Fire Extinguishers

1 - 277

STUDENT SAFETY PLEDGE FORM

, who is enrolled in Vocational					
, will as a part of his shop experience operate machines, providing that his parent or guardian gives written permission.					
It is understood that each student will be given proper instruction, both in the use and in the correct safety procedures or the equipment, before being allowed to operate it himself. The student must assume responsibility for following safe practices, and therefore, we ask that he subscribe to the following safety pledge.					
1. I PROMISE TO FOLLOW ALL SAFETY RULES FOR THE SHOP.					
2. I PROMISE NEVER TO USE A MACHINE WITHOUT FIRST HAVING PERMISSION FROM THE INSTRUCTOR.					
3. I WILL NOT ASK PERMISSION TO USE A PARTICULAR MACHINE UNLESS I HAVE BEEN INSTRUCTED IN ITS USE, AND HAVE MADE 100% ON THE SAFETY TEST FOR THAT MACHINE.					
4. I WILL REPORT ANY ACCIDENT OR INJURY TO THE TEACHER IMMEDIATELY.					
DATE STUDENT'S SIGNATURE					
I hereby give my consent to allow my son to operate all machines and equipment necessary in carrying out the requirements of the course in which he is enrolled.					
Date PARENT'S SIGNATURE					
Parents are cordially invited to visit the shop to inspect the machines and see them in operation.					

NATIONAL STANDARD SCHOOL SHOP SAFETY INSPECTION CHECK LIST Prepared by the Joint Safety Committee of the AMERICAN VOCATIONAL ASSOCIATION - NATIONAL SAFETY COUNCIL

 Date

INTRODUCTION

A safe environment is an essential part of the school shop safety education program. The safe environment will exist only if hazards are discovered and corrected through regular and leaquent inspections by school personnel-administrators, teachers and students. Safety inspections are to determine if everything is satisfactory.

Inspections may be made at the request of the board of education, the school administration or upon the initiative of the teacher. Some

communities have drawn upon the cooperative service of professional safety engineers, inspectors of state labor departments, insurance companies and local safety councils to supplement and confirm inspections by school personnel.

The National Standard School Shop Safety Inspection Check List, recommended by the President's Conference on Industrial Safety is an objective inspection procedure for the school shop.

This not only tends to share responsibility but stimulates a broader

DIRECTIONS

WHO INSPECTS?

This will depend upon local policies. It is recommended, however, that shop teachers, and students—the student safety engineer and/or student safety committee—participate in making regular inspections.

WHEN TO INSPECT?

As a minimum, a safety inspection should be made at the beginning of every school term or semester. More frequent inspections may

be advisable.

HOW TO INSPECT?

Inspections should be well planned in advance.

Inspections should be systematic and thorough. No location that may contain a hazard should be overlooked.

The current report should be compared with previous records to determine progress. The report should be studied in terms of the accident situation so that special attention can be given to those conditions and locations which are accident producers.

Each unsafe condition should be corrected as soon as possible in

Inspection reports should be clear and concise, but with sufficient explanation to make each recommendation for improvement underatandable.

accordance with accepted local procedures.

interest in the maintenance of a safe school shop.

A definite policy should be established in regard to taking materials and equipment out of service because of unsafe conditions.

The inspection report can be used to advantage as the subject for staff and class discussion.

CHECKING PROCEDURE

Draw a circle around the appropriate letter, using the following letter scheme:

S — Satisfactory (needs no attention)
A — Acceptable (needs some attention)
U — Unsatisfactory (needs immediate attention)

Recommendations should be made in all cases where a "U" is circled. Recommendations should be made in all cases where a "U" is circled.

Space is provided at the end of the form for such comments. Designate the items covered by the recommendations, using the code ments or regulations which have local application only.

1. Machines, benches, and other equipment are arranged so as to

A. GENERAL PHYSICAL CONDITION

conform to good safety practices	pupils and taking adequate ; 13. Lockers are inspected
3. Condition of sisles S A U	14. Locker doors are kept
4. Condition of floors	15. Walls are clear of objection 16. Utility lines are proper
6. Illumination is safe, sufficient, and well placed S A U 7. Ventilation is adequate and proper for conditions S A U	17. Teachers know the pro- fication of the fire departm
8. Temperature control	18. Air in shop is free from
3. Fire extinguishers are of proper type, adequately supplied, properly located and maintained	20
10. Teacher and pupils know location of and how to use proper type for various fires	21

TEST

1.	Match ea	ch of these definitions with the co	rrect term	on the right.
	a.	The state or condition of being safe; freedom from	1.	Accident
		danger, risk, or injury	2.	First aid
	b.	Includes any suddenly occuring, unintentional event which causes injury or property damage	3.	Safety
,	C.	The immediate, temporary care given the victim of an accident or sudden illness until the services of a physician can be obtained	!	
2.	Match th of their	e following colors of the safety color use.	r code with	the correct statements
	a.	Designates caution	1.	Green
	b.	Used to identify the location of fire fighting	2.	lvory
		equipment	3.	Orange
	c.	Designates the location of safety and first aid	4.	Purple
		equipment	5.	Blue
	d.	Designates dangerous parts of equipment which may cut,	6.	Red
		crush, shock, or otherwise injure	7.	Yellow
	e.	Designates caution against starting equipment while it is being worked on, or against the use of defective equipment		
	f.	Used to reflect light and "show the way"		

3.	Place an	"X" before the personal safety rules.
	a.	Wear cut-off jeans while welding
	b.	Remove rings and other jewelry when working in the shop
	c.	Wear safety glasses only when welding
	d.	Horseplay is safe in shop areas away from the rotating equipment
	e.	Use soap and water frequently as a method of preventing skin diseases
	f.	Remove ties when working around machine tools or rotating equipment
	g.	Always wear safety glasses; use suitable helment and goggles for welding
	h.	A medallion on a chain around the neck is safe, since the chain will probably break if it gets caught in a machine
	i.	Confine long hair before operating rotating equipment
4.	Place an	"X" before the general shop safety rules.
	a.	Use an electric drill with a missing ground wire
	b.	Turn off a defective machine and tell no one that it is defective
	c.	Keep all guards and safety devices except with the specific authorization of the instructor
	d.	Operate a hazardous machine by trial and error if the instructor has not had time to give instruction on how to operate the machine safely
	e.	Keep all hand tools sharp, clean, and in safe working order
	f.	Turn off the power before leaving a machine tool
	g.	Report only severe accidents to the instructor
	h.	Wait until the end of the class period to clean up all spills
	i.	Clean the chips from a machine with a brush
	j.	Oil the power tools while they are running so that the oil will get to the working parts
	k.	Oily rags should be stored in metal containers
	l.	Keep the shop floor clear of scraps and litter
	m	. Use a power tool with a guard missing, but be extremely careful since the instructor did not authorize removing the guard

	n.	Use correct properly fitting wrenches for nut be turned or held	:s, bolts,	, and o	bjects to			
	0.	Use a solvent only after determining its proper it has to do, and how to use it	rties, wh	nat kind	of work

HAND TOOLS UNIT II

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to select basic rules for the care and safe use of hand tools, identify various types of hand tools, and demonstrate the ability to use tools safely. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Select from a list four basic rules concerning the care of hand tools.
- 2. Select from a list five basic rules concerning the safe use of hand tools.
- 3. Identify nine types of wrenches. .
- 4. Identify six types of pliers.
- 5. Identify three types of vises.
- 6. Select the picture of a hacksaw.
- 7. Identify four types of files.
- 8. Identify three types of punches.
- 9. Match the names of four types of chiscls with the pictures of the chisels.
- 10. Identify four types of screwdrivers.
- 11. Identify three types of drills.
- 12. Identify two types of metal cutting tools.
- 13. Match the names of seven types of hammers with the pictures of the hammers.
- 14. Match the names of seven types of measuring tools with the pictures of the tools.
- 15. Match the names of five small engine repair tools with the correct picture of each.
- 16. Demonstrate the ability to use tools safely.

HAND TOOLS UNIT II

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide each student with objective sheet.
- B. Provide each student with information sheet.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheet.
- C. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objective sheet
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1--Types of Wrenches
 - 2. TM 2--Types of Pliers
 - 3. TM 3--Types of Vises and Hacksaws
 - 4. TM 4--Types of Files and Punches
 - 5. TM 5-Types of Chisels and Screwdrivers
 - 6. TM 6-Types of Drills and Metal Cutting Tools

- 7. TM 7-Types of Hammers
- 8. TM 8-Types of Measuring Tools
- 9. TM 9-Small Engine Repair Tools
- D. Test
- E. Answers to test

HAND TOOLS UNIT II

INFORMATION SHEET

- I. Basic rules concerning the care of hand tools
 - A. Keep tools sharp
 - B. Protect the cutting edge of tools when carrying or storing
 - C. Keep tools dry and lightly oiled when not in use
 - D. Use tools only for the purpose for which they were intended
- II. Basic rules concerning the safe use of hand tools
 - A. Use the right tool for the job
 - B. Do not use dull or broken tools
 - C. Be sure that tool handles are in good condition and securely fastened to the body of the tool
 - D. Do not throw tools
 - Keep fingers away from edges of cutting tools and work away from the body
- III. Wrenches (Transparency 1)
 - A. Fixed jaw
 - 1. Open end
 - 2. Box end
 - 3. Combination
 - 4. Socket
 - 5. Allen (Setscrew)
 - B. Adjustable jaw
 - 1. Open-end adjustable
 - 2. Monkey
 - 3. Vise grip
 - 4. Pipe

- IV. Pliers (Transparency 2)
 - A. Channel lock
 - B. Needle nose
 - C. Combination slip-joint
 - D. Vise grip
 - E. Diagonal
 - F. Lineman (Electrician's)
- V. Vises (Transparency 3)
 - A. Machinist's
 - B. Blacksmith's
 - C. General utility
- VI. Hacksaws (Transparency 3)

(NOTE. Use a coarse tooth blade for sawing heavy work, use a fine tooth blade for light and hollow materials.)

- VII. Files (Transparency 4)
 - A. Flat
 - B. Half round
 - C. Round
 - D. Taper triangle
- VIII. Punches (Transparency 4)
 - A. Center
 - B. Solid
 - C. Pin
 - IX. Cold chisels (Transparency 5)
 - A. Flat
 - B. Cape
 - C. Round nose
 - D. Diamond point

- X. Screwdrivers (Transparency 5)
 - A. Standard
 - B. Phillips
 - C. Spiral ratchet
 - D. Offset
- XI. Drills (Transparency 6)
 - A. Hand
 - B. Breast
 - C. Carpenter's brace
- XII. Metal cutting tools (Transparency 6)
 - A. Hand snips
 - B. Bolt cutters
- XIII. Hammers (Transparency 7)
 - A. Ball-peen (Machinist's)
 - B. Sledge
 - C. Machinist's riveting
 - D. Blacksmith's
 - E. Soft-face
 - F. Claw
 - G. Engineer's
- XIV. Measuring tools (Transparency 8)
 - A. Feeler gage
 - B. Calipers
 - 1. Outside
 - 2. Inside

- C. Steel tape
- D. Micrometer
- E. Steel rule
- F. Combination square

XV. Small engine repair tools (Transparency 9)

- A. Ring compressor
- B. Starter wrench
- C. Flywheel holder
- D. Flywheel puller
- E. Spring compressor

XVI. Safety in the use of hand tools

- A. Keep all handles tight
- B. A screwdriver should not be used as a pry or chisel
- C. Select the correct sized screwdriver
- D. Always pull so that the strain is against the solid jaw of an adjustable wrench
- E. Pushing on a wrench is dangerous
- F. Mushroomed heads on chisels should be ground off
- G. Use a handle on a file
- H. A file is not for prying or hammering
- I. Use the proper tool for the job
- J. Store tools in the proper place
- K. Clean tools frequently

- 16. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to identify tools used in measuring, match basic units of measurement with the correct rule, classify 1/8 inch, 1/16 inch, and 1/32 inch scale rules, and demonstrate the ability to read a rule to the 1/16 inch scale. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Identify five tools used in basic measuring.
- 2. Match three basic units of measurement found on rules with the correct rule.
- 3. Classify rules as either 1/8 inch, 1/16 inch, or 1/32 inch scale.
- 4. Demonstrate the ability to:
 - a. Read a rule when given a drawing of the rule and locations on the rule.
 - b. Measure objects to a given scale.
 - c. Construct lines to given lengths.

56

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Collect different types of measuring tools and demonstrate each to the students.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete assignment sheets.
- D. Take test.

BLUEPRINT READING UNIT II

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to identify parts of a pictorial view as used on a blueprint. He should be able to demonstrate the fundamentals of blueprint reading by drawing a three-view sketch of a specified rectangular block. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on a unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Indicate in writing the purpose of a blueprint.
- 2. Match the three major views of a drawing with the correct name of each.
- 3. Match the three basic elements of a blueprint with their purposes.
- 4. Match the basic types of dimensions with their uses and identify these dimensions on a blueprint drawing.
- 5. Match six lines with the correct type of line and identify seven common types of lines on a blueprint drawing.
- 6. Match fifteen blueprint abbreviations with their corresponding identifications.
- 7. Draw a simple three-view sketch of a rectangular block, using the following dimensions: eight inches long by one inch wide by one-half inch thick.

83

BLUEPRINT READING UNIT II

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide each student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheet.
- C. Obtain drawing paper, ruler, and tri-square protractor to be used in drawing plans.
- D. Complete assignment sheet.
- E. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1--Converting a Pictorial View into a Three-Sided View
 - 2. TM 2--Types of Dimensions on a Blueprint
 - 3. TM 3-Basic Lines Used in Blueprint Reading
 - 4. TM 4--Use of Lines on a Blueprint Reading

- D. Assignment Sheet #1--Draw a Three-View Sketch
- E. Test
- F. Answers to test

BLUEPRINT READING UNIT II

INFORMATION SHEET

- Purpose of blueprint--To convey a message from the draftsman to the workman indicating shapes and dimensions of objects to be built
- II. Major views of a drawing (Transparency 1)
 - A. Top
 - B. Front
 - C. End

- III. Basic elements of a blueprint
 - A. Lives-Give shape and dimension to the object
 - B. Dimensions--Give size and location of various segments of items being constructed
 - C. Notes--Give details of construction not shown by lines
- IV. Types of dimensions (Transparency 2)
 - A. Overall--Describes a total distance such as the complete length, width, or thickness of a part
 - B. Size-Gives information concerning the size of a part
 - C. Location-Gives information concerning the location of some detail of construction such as a hole
 - V. Basic lines used in blueprint reading (Transparencies 3 and 4)
 - A. Border line--Serves as a frame for the blueprint
 - B. Object line-Indicates the outline of an object
 - C. Hidden line-Represents an edge that cannot be seen from the outside of the object
 - D. Extension line-Indicates the exact distance the dimension describes

INFORMATION SHEET

- E. Dimension line- Extends between the extension lines to clarify dimensions
- F. Center line--Used to locate the center of a circle or a curved surface
- G. Pointer line-Shows the detail described by a dimension or note
- H Cutting plane line--Used to show the shape of complicated parts
- I. Break line--Used to show interior detail

VI. Common abbreviations used on blueprints

- A. C. I .-- Cast Iron
- B. C. C.--Center to Center
- C. C. Bore--Counterbore
- D. C. R. S.-Cold Rolled Steel
- E. C. S .-- Cast Steel
- F. Csk.--Countersink
- G. Dia.--Diameter
- H. F--Finish
- I. F. A. O .-- Finish All Over
- J. Fin-Finish
- K. F. S .-- Full Size
- L. F. S. D.--Full Size Detail
- M. Hex-Hexagon
- N. I. D.--Inside Diameter
- O. N. C .-- National Coarse
- P. N. F .-- National Fine
- Q. No. or #--Number
- R. O. C .-- On Center
- S. O. D.--Outside Diameter
- T. R. or Rad--Radius
- U. Req'd-Required

BLUEPRINT READING UNIT II

ASSIGNMENT SHEET #1-DRAW A THREE-VIEW SKETCH

Draw a three-view sketch of a rectangular block using the following dimensions. Be sure to show your dimensions.

1. 10" long by 2" wide by 1" thick.

2. 12" long by 1" wide by 1/4 " thick.

BLUEPRINT READING UNIT II

TEST

1.	Write	the	purpose	of	а	blueprint	for	а	workman.
	!!!	LIIV	Pulpus	Ų.	•	Oldopi IIIC		-	*************************************

2.	Match the three major vie	ews of a	drawing with the correct name of the v	iew.

GAS WELDING UNIT I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to set up, light, adjust, and turn off oxyacetylene cutting equipment following the proper order and safety precautions. This knowledge will be evidenced through demonstration and by scoring one hundred percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Discuss briefly the reasons for the welding safety rules given on the test.
- 2. Match the names with the correct parts of an oxyacetylene unit, cutting torch, and accessories.
- 3. Distinguish between an oxygen and an acetylene hose connection.
- 4. Match the names with the correct types of oxyacetylene cutting flames.
- 5. Demonstrate with one-hundred percent accuracy the ability to:
 - a. Set up equipment for oxyacetylene cutting.
 - b. Turn on, light, and adjust to a neutral flame the oxyacetylene cutting equipment and properly turn off the cutting flame and oxyacetylene equipment.
 - c. Produce the three types of cutting flames.

GAS WELDING UNIT I

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide students with objective sheet.
 - B. Provide students with information and job sheets.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information sheet.
 - F. Demonstrate and discuss procedures outlined in the job sheets.
 - G. Give test.
- II. Students:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1-Oxyacetylene Cutting Equipment
 - 2. TM 2--Welding Regulators
 - 3. TM 3--Types of Oxyacetylene Cutting Flames

D. Job sheets

- 1. Job Sheet #1--Set Up Equipment for Oxyacetylene Cutting
- 2. Job Sheet #2--Turn On, Light, and Adjust the Cutting Torch to a Neutral Flame and Turn Off the Flame
- 3. Job Sheet #3--Produce the Three Types of Cutting Flames
- E. Test
- F. Answers to test

GAS WELDING UNIT I

INFORMATION SHEET

I. Safety rules

- A. Support oxygen and acetylene cylinders in an upright position so they cannot be tipped over; acetylene gas is in a liquid state in the cylinder and should be used in a vertical position so that acetone will not be withdrawn
- B. Blow out cylinder valves (crack vaive for a second) before attaching regulators in order to remove dust and dirt
- C. Release adjusting screw on regulator before opening cylinder valve in order to prevent damage to regulators and possible injury to operator
- D. Stand to the side of regulators keeping the cylinder valve between operator and regulator when opening cylinder valves
- E. Open cylinder valves slowly
- F. Do not use acetylene (in free state) at pressures higher than 15 psi; acetylene becomes unstable at pressures above 15 psi
- G. Purge oxygen and acetylene passages (individually) before lighting torch
- H. Light acetylene before opening oxygen preheat valve on torch
- I. Never use oil or grease on regulators, torches, fittings, etc.; oil or grease and oxygen have a very great attraction for one another and will combine with explosive violence
- J. Do not use oxygen as a substitute for compressed air
- K. Use safety goggles, gloves, and coveralls
- L. Have CO₂ or dry powder type fire extinguisher available
- M. Test connections for leaks with ivory soap suds, paint brush, and water
- N. Avoid lighting torch or cutting near combustible materials
- O. Never open the acetylene cylinder valve more than 1 1/2 turns
- P. Always operate torch in a well-ventilated area
- Q. Never cut on containers that have been used for combustible materials
- R. Avoid breathing toxic fumes when cutting

Example: Galvanized metal

INFORMATION SHEET

- S. Place steel caps on all gas cylinders when they are being moved or stored to protect the valves
- T. Shut off cylinder valves when not in use for any length of time to reduce the possibility of leakage and strain on the equipment
- U. Turn acetylene torch valve off first in order that the flame will go out immediately
- V. Keep hands, gloves, and clothing free from oil and grease
- II. Oxyacetylene cutting equipment (Transparencies 1 and 2)
 - A. Acetylene cylinder
 - B. Acetylene cylinder valve
 - C. Acetylene fitting
 - D. Acetylene regulator
 - E. Acetylene torch valve
 - F. Cylinder truck
 - G. Flint lighter
 - H. Oxygen cutting lever
 - Oxygen cylinder
 - J. Oxygen cylinder valve
 - K. Oxygen fitting
 - L. Oxygen pre-heat valve
 - M. Oxygen regulator
 - N. Oxygen torch valve
 - O. Safety chain
 - P. Slip-in tip
 - Q. Tip nut
 - R. Torch body
 - S. Welding gloves
 - T. Welding goggles

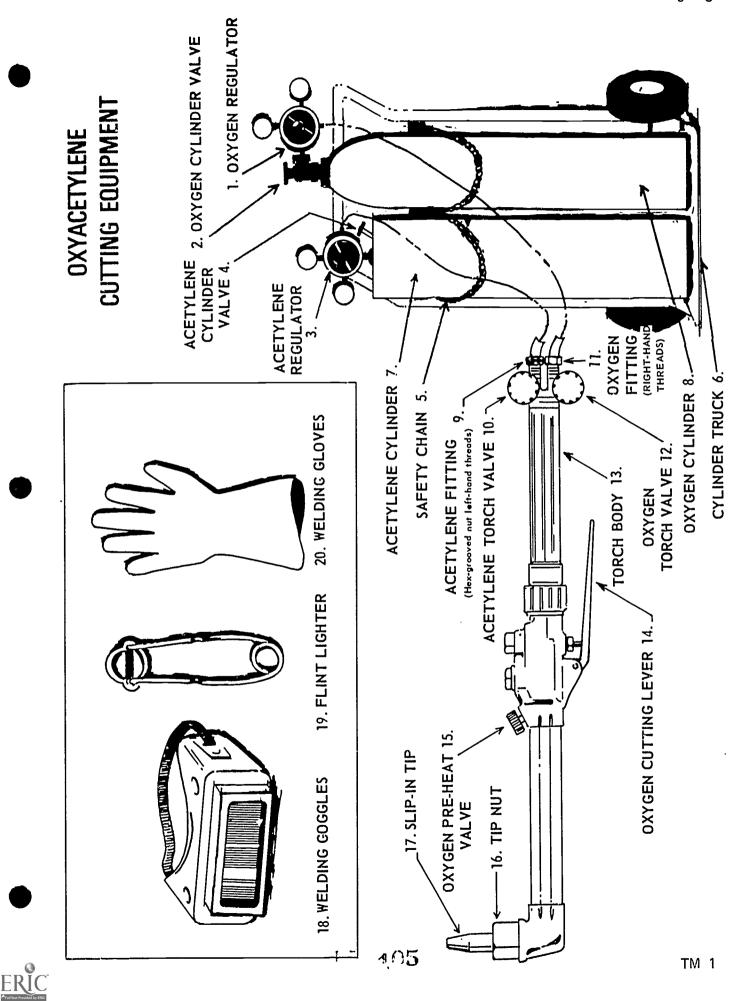

INFORMATION SHEET

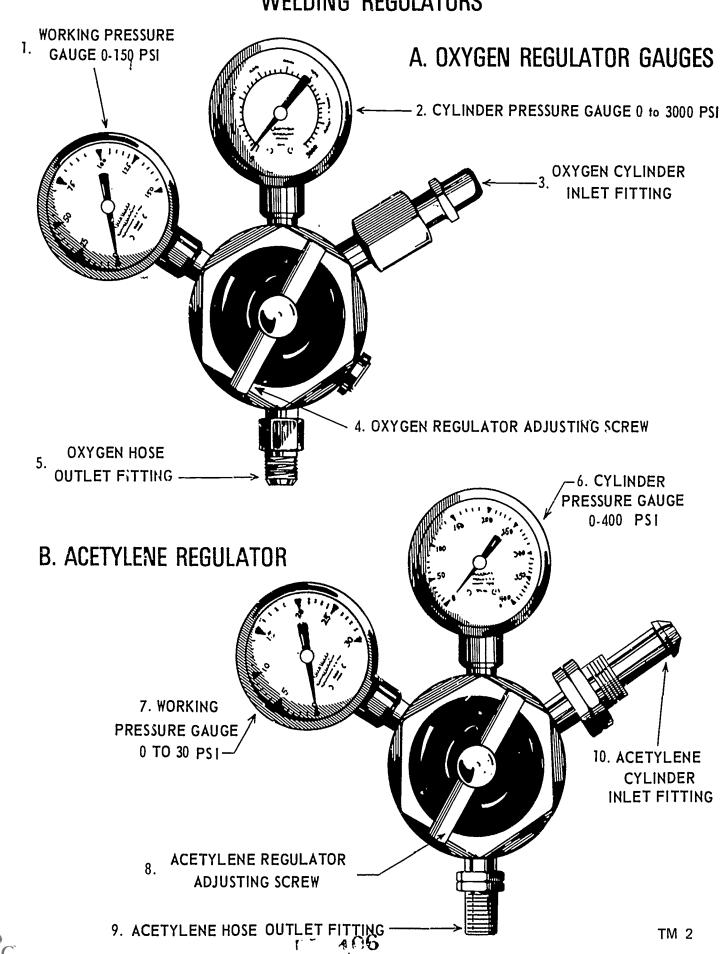

III. Hose connections

- A. Oxygen hose
 - 1. Green
 - 2. Oxygen fitting with right-hand threads
- B. Acetylene hose
 - 1. Red
 - 2. Grooved nut acetylene fitting with grooved left-hand threads
- IV. Types of cutting flames (Transparency 3)
 - A. Carburizing flame
 - 1. Burns excess of acetylene (Acetylene feather is visible on inner cone.)
 - 2. Recommended flame for cutting cast iron
 - 3. Introduces carbon into weld causing hardening of the metal (Resultant weld is weak.)
 - B. Neutral flame
 - 1. Burns equal amounts of oxygen and acetylene
 - 2. Identified by clear, well-defined white cone
 - 3. Temperature 5950°
 - C. Oxidizing flame
 - 1. Burns excess of oxygen
 - 2. Identified by short white inner cone
 - 3. Oxidizes the metal causing it to harden and become brittle
 - 4. Not recommended for average cutting
 - 5. Is the hottest flame

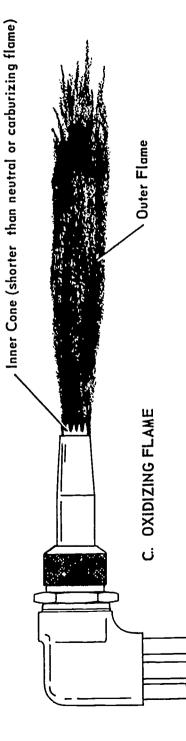

WELDING REGULATORS

TYPES OF OXYACETYLENE CUTTING FLAMES

GAS WELDING UNIT I

JOB SHEET #1--SET UP EQUIPMENT FOR OXYACETYLENE CUTTING

- Tools and materials needed
 - A. Coveralls
 - B. Acetylene cylinder, hose, and regulator
 - C. Oxygen cylinder, hose, and regulator
 - D. Torch body
 - E. Cutting assembly with a number one tip
 - F. Wrenches to fit connections
 - G. Ivory soap
 - H. Can of water
 - I. Paint brush
- II. Procedure
 - A. Fasten cylinders in a vertical position
 - B. Remove caps from cylinders
 - C. Crack valves of each cylinder then close valves
 - D. Connect oxygen regulator to oxygen cylinder
 - Turn adjusting screw on regulator counterclockwise until tension on spring is released
 - 2. Slowly open cylinder valve wide open
 - E. Connect acetylene regulator to acetylene cylinder
 - 1. Turn adjusting screw on regulator counterclockwise until tension on spring is released
 - 2. Open cylinder valve 1/2 to 3/4 of a turn (never more than 1 1/2 turns)
 - F. Connect acetylene hose to acetylene regulator and purge hose

JOB SHEET #1

- G. Connect oxygen hose to oxygen regulator and purge hose
- H. Connect torch body to oxygen and acetylene hose and close both valves on torch body
- I. Attach cutting attachment to torch body (Use a number 1 cutting tip.)
- J. Close oxygen preheat valve on cutting attachment
- K. Turn adjusting screw on oxygen regulator clockwise until working pressure gauge reads 35 psi
- L. Turn adjusting screw on acetylene regulator clockwise until working pressure gauge reads 4 psi
- M. Test all connections for leaks with Ivory soap suds and water (Apply soap suds with a clean paint brush.)

GAS WELDING UNIT I

JOB SHEET #2--TURN ON, LIGHT, AND ADJUST THE CUTTING TORCH TO A NEUTRAL FLAME AND TURN OFF THE FLAME

- I. Tools and materials needed
 - A. Oxyacetylene equipment as set up on Job Sheet #1
 - B. Flint lighter
 - C. Coveralls
- II. Procedure
 - A. Check all cylinder, regulator, and torch valves to make sure they are off
 - B. Open acetylene cylinder valve 1/2 to 3/4 of a turn

(CAUTION: Never open more than 1 1/2 turns)

- C. Open acetylene valve on torch one turn
- Turn adjusting screw on acetylene regulator clockwise until desired pressure is reached (determined by size of tip)
- E. Close acetylene valve on torch
- F. Open oxygen cylinder valve all the way
- G. Open oxygen torch valve one turn
- H. Open oxygen preheat valve on cutting attachment one turn
- I. Turn adjusting screw on oxygen regulator clockwise until desired pressure is reached (determined by size of tip)
- J. Close oxygen preheat valve on cutting attachment
- K. Open acetylene valve on torch 1/4 turn
- L. Light the torch with flint lighter and adjust until smoke on flame clears
- M. Open oxygen preheat valve slowly and adjust to a neutral flame
- N. Depress the oxygen cutting lever and check to see that a neutral flame is present

(NOTE: If necessary, adjust the oxygen preheat valve with the caygen cutting lever depressed until a neutral flame is secured.)

- III. Procedure for turning off the flame and oxyacetylene unit
 - A. Close acetylene valve on torch
 - B. Close oxygen preheat valve
 - C. Close acetylene cylinder valve
 - D. Close oxygen cylinder valve
 - E. Open acetylene valve on torch (When gauges reach 0, close torch valve and release adjusting screw on acetylene regulator by turning counterclockwise.)
 - F. Open oxygen preheat valve on torch (When gauges reach 0, close oxygen preheat valve and release adjusting screw on oxygen regulator by turning counterclockwise.)
 - G. A Close oxygen valve on torch
 - H. Place torch and hose on hanger or brackets provided

GAS WELDING UNIT I

JOB SHEET #3-PRODUCE THE THREE TYPES OF CUTTING FLAMES

- I. Tools and materials needed
 - A. Oxyacetylene equipment as set up on Job Sheet #1
 - B. Flint lighter
 - C. Coveralls
- II. Procedure
 - A. Start with the neutral flame as described on Job Sheet #2
 - B. Produce a carburizing flame
 - 1. Reduce the supply of oxygen
 - 2. Slowly adjust the oxygen preheat valve until an acetylene feather is produced
 - C. Produce and oxidizing flame
 - 1. Increase the supply of oxygen
 - 2. Adjust the oxygen preheat valve (Result is a flame with an excess of oxygen.)
 - D. Adjust to a neutral flame
 - 1. Reduce the oxygen supply
 - 2. Slowly adjust the oxygen preheat valve

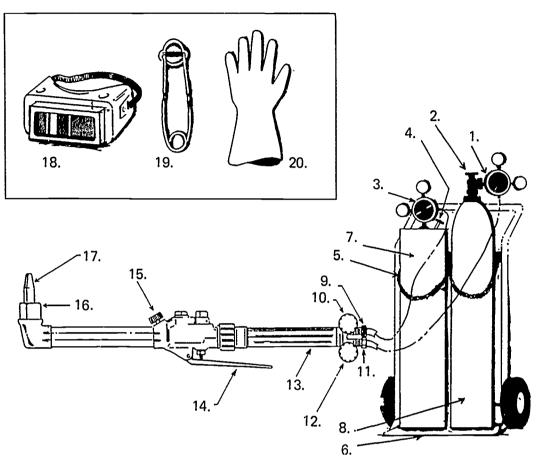

GAS WELDING UNIT I

TEST

1.	Disc	uss briefly the reasons for these welding safety rules.
	a.	Acetylene cylinders should always be kept in an upright position.
	b.	Place steel caps on all gas cylinders when they are being moved.
	c.	Blow out cylinder valves before attaching regulators.
	d.	Never use oil or grease on regulators, torches, fittings, etc.
	ر e.	Do not use acetÿlene at pressures higher than 15 psi.
	f.	Turn acetylene torch valve off first.
	g.	Shut off cylinder valves when not in use for any length of time.
	h.	Release the adjusting screw on the regulator before opening the cylinder valve.

2. Match the names with the correct parts of the oxyacetylene equipment.

	. 4	. Name of
- a.	Acety	/leñe cylinder

b.	Acetylene	cvlinder	valve

_	A 4 I	Circles
r.	Acetylene	tittina

Ч	Acetylene	regulator

____e. Acetylene torch valve

_____f. Cylinder truck

____g. Flint lighter

____h. Oxygen cutting lever

____i. Oxygen cylinder

____j. Oxygen cylinder valve

____k. Oxygen fitting

	I. Oxygen pre-heat valve
	m. Oxygen regulator
	n. Oxygen torch valve
	o. Safety chain
	p. Slip-in tip
	q. Tip nut
	r. Torch body
	s. Welding gloves
•	t. Welding goggles
3.	Which of the following identifies an oxygen hose connection? Place an "X" in the blank.
	a. Green
	b. Grooved nut fitting with left-hand threads
	c. Red
	d. Fitting with right-hand threads
4.	Match the names with the correct type of oxyacetylene cutting flames.
	a.
	b.
	(Continued on next page)

- 1. Carburizing flame
- 2. Neutral flame
- 3. Oxidizing flame
- 5. Demonstrate the ability to:
 - a. Set up equipment for oxyacetylene cutting.
 - b. Turn on, light, and adjust to a neutral flame to oxyacetylene cutting euqipment and properly turn off the cutting flame and oxyacetylene equipment.
 - c. Produce the three types of cutting flames.

(NOTE: If this has not been accomplished prior to the test, ask your instructor when the above activities should be completed.)

GAS WELDING UNIT I

ANSWERS TO TEST

1.	The	discussion	should	include	these	noints:
		41304331011	SHOULG	IIIGIGGG	CITOSO	OUIII Co.

- a. Acetylene gas is in a liquid state in the cylinder and should be used in a vertical position so that acetone will not be withdrawn
- b. Steel caps protect the valves
- c. Blow out the cylinder valve to remove dust and dirt
- d. Oil or grease and oxygen have a very great attraction for one another and will combine with explosive violence
- e. Acetylene becomes unstable at pressures above 15 psi
- f. Turn the acetylene torch valve off first in order that the flame will go out immediately
- g. Shut off cylinder valves to reduce the possibility of leakage and strain on the equipment
- h. Release the adjusting screw to prevent damage to the regulators and possible injury to the operator

 - c. 2
- 5. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to select the purposes of a slag box, identify a backfire and flashback and list step by step procedures to follow when a flashback occurs. He should be able to demonstrate the procedures for making a 90° cut and cut holes in mild steel. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on a unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match eight terms and definitions associated with cutting of metal.
- 2. Name the parts of the cutting tip.
- 3. Select from a list the purposes of a slag box.
- 4. Select from a list the reasons for poor cuts.
- 5. Select from a list the causes of backfire.
- 6. List two results of a backfire.
- 7. Name two indications of a flashback.
- 8. List step by step what should be done in case of a flashback.
- 9. Discuss the procedure that should be followed if a cut is lost.
- 10. Demonstrate the ability to:
 - a. Make 90° cuts in mild steel.
 - b. Cut holes in mild steel.

0°°° ^

449

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Discuss terminal and specific objectives.
- D. Discuss information sheet.
- E. Demonstrate and discuss procedures outlined in job sheets.
- F. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheets.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Job sheets
 - 1. Job Sheet #1--Make 90° Cuts on Mild Steel
 - 2. Job Sheet #2--Cut a Hole in Mild Steel
 - D. Test
 - E. Answers to test

II. References:

- A. Althouse, Andrew D., Carl H. Turnquist, and William A. Bowditch. *Modern Welding*. Homewood, Illinois: The Goodheart- Willcox Company, Inc., 1965.

INFORMATION SHEET

I. Terms and definitions

- A. Oxide--Term usually applied to rust, corrosion, coating, film, or scale (NOTE: Oxygen combines with the metal causing oxides.)
- B. Oxidizing-Combining oxygen with another substance

(NOTE: A metal is oxidized when it is cut.)

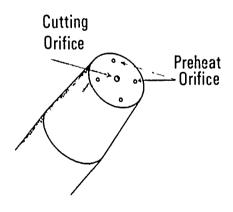

- C. Cutting-Oxidation of metal with a cutting torch
- D. Slag box--Metal container with a layer of water or sand to catch hot slag
- E. Drag line--Situation in which the most distant portion of the cutting stream lags behind the stream nearest the cutting tip
- F. Kerf--Area where the metal was removed in the form of an oxide during the cutting process
- G. Flashback--Fire inside the torch

(NOTE: This is a very dangerous condition.)

H. Backfire--Momentary burning back of the flame into the tip

II. Parts of cutting tip

- A. Preheat orifice--Preheats metal to kindling point of approximately 1600°F
- B. Cutting orifice--Removes oxidized metal

INFORMATION SHEET

- III. Purposes of slag box
 - A. Catch hot slag
 - B. Prevent fire
 - C. Protect clothing
 - D. Protect welding hoses
- IV. Reasons for poor cuts
 - A. Improper speed
 - B. Inadequate preheat
 - C. Insufficient oxygen
 - D. Improper pressure
- V. Causes of backfire
 - A. Insufficient acetylene or oxygen pressure
 - B. Loose cutting tip
 - C. Dirty tip
 - D. Overheating of cutting tip

(NOTE: These things should be carefully checked to prevent backfire.)

- VI. Result of a backfire
 - A. Flame burns momentarily back into tip
 - B. A loud snap or pop results

(NOTE: Flame may go out or continue to burn in a normal manner.)

- VII. Indications of flashback
 - A. Fire inside torch
 - B. Flame disappears
 - C. Squealing or hissing noise inside torch
 - D. Sparks coming from the torch
 - E. Smoke coming from the torch

INFORMATION SHEET

VIII. In case of flashback

- A. Close the oxygen preheat valve
- B. Close the oxygen torch valve
- C. Close acetylene torch valve
- D. Release oxygen regulator screw
- E. Release acetylene regulator screw
- F. Examine acetylene unit
- G. Reset regulator pressures
- H. Light the torch

(NOTE. If heavy smoke comes out of the torch tip and the torch body becomes hot, the flashback has probably traveled past the mixing chamber into the hose. In this case, shut off the oxygen clyinder valve, the acetylene cylinder valve, and notify your instructor.)

IX. Procedures for restarting a cut

- A. Release the oxygen cutting lever
- B. Preheat edge (only) where cutting action was stopped
- C. Continue cut

JOB SHEET #1--MAKE 90° CUTS ON MILD STEEL

- I. Equipment, tools, and material needed
 - A. Cutting outfit with tip assembly
 - B. Mild steel plate 1/4" to 1/2" thick, 4" wide or wider, 8" long or longer
 - C. Soapstone with a sharp point or edge
 - D. Straight edge
 - E. Gloves
 - F. Safety goggles
 - G. Pliers
 - H. Coveralls
 - I. Flint lighter
 - J. Welding table
 - K. Slag box
 - L. Can of water
 - M. Cutting tip #1 (#56 orifice)

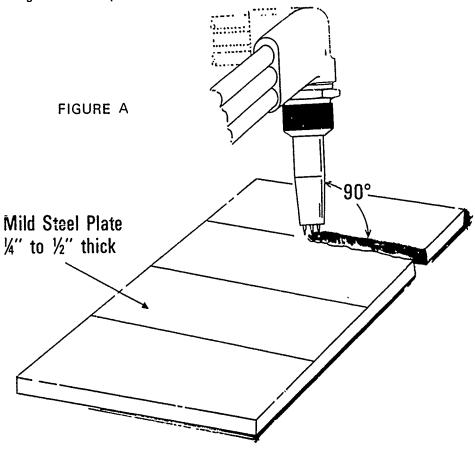

II. Procedure

- A. Mark four parallel lines 2" apart on plate to be cut
- B. Adjust oxygen regulator (35 psi)
- C. Adjust acetylene regulator (4 psi)
- D. Place plate to be cut over slag box
- E. Light torch
- F. Adjust to neutral flame
- G. Assume comfortable position
- H. Place hoses behind operator

- I. Maneuver torch with both hands
- J. Hold preheat flame with tip of inner cone 1/16" to 1/8" above top of plate at right edge until red spot appears
- K. Depress the oxygen cutting lever, raise tip 1/4" to 1/2", and move from right to left across the plate (For left-handed operators, go from left to right.) (Figure A)
- L. Hold the tip at right angles to work while cutting with inner cone being 1/4" to 1/2" above work
- M. Make 90° cuts until you have developed the proper procedure
- N. Cool metal by placing in can of water with the aid of pliers
- O. Show samples to instructor for approval and grading

III. Diagram of the procedure

JOB SHEET #2--CUT HOLES IN MILD STEEL

- 1. Equipment, tools, and material needed
 - A. Cutting outfit with #1 tip (#56 orifice)
 - B. Mild steel plates (prepared in Job Sheet #1)
 - C. Soapstone with a sharp point or edge
 - D. Straight edge
 - E. Gloves
 - F. Safety goggles
 - G. Pliers
 - H. Coveralls
 - I. Flint lighter
 - J. Welding table
 - K. Slag box
 - L. Can of water

II. Procedure

- A. Draw two circles on metal
 - 1. 1" in diameter, 1" from edge
 - 2. 1/2" in diameter, 1" from edge
- B. Adjust oxygen regulator (35 psi)
- C. Adjust acetylene regulator (4 psi)
- D. Place metal to be cut over slag box
- E. Light torch

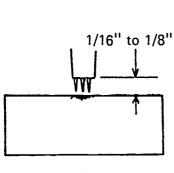

- F. Adjust to neutral flame
- G. Assume comfortable position
- H. Place hoses behind operator
- I. Maneuver torch with both hands
- J. Hold tip of inner cone 1/16" to 1/8" above point to be cut until metal turns bright red (Figure A)
 - 1. Tilt torch 15° from vertical position (This will allow molten metal to be blown away from operator.)
 - 2. Depress oxygen cutting lever slowly moving torch backwards (to the operator's right if right-handed) until cut pierces plate
- K. Return cutting torch to vertical position
 - 1. Raise cutting tip until tip of inner cone is from 1/4" to 1/2" above the plate
 - 2. Make cut (Figure B)
- L. Cut just inside soapstone mark until circular cut is completed

 (NOTE: If the mark disappears, use a center punch to mark the outline.)
- M. Repeat steps K and L until all holes are cut
- N. Cool metal by placing in can of water with the aid of pliers
- O. Show samples to instructor for approval and grading

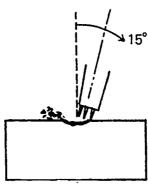

III. Diagram of the procedure

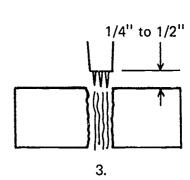

FIGURE A

1.

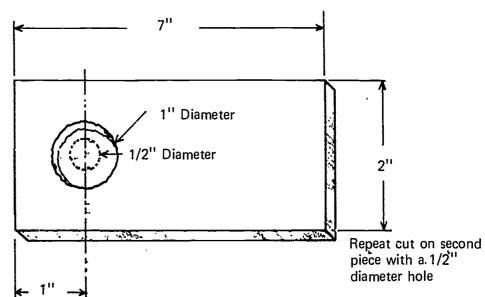

2.

- 1. Preheat to bright red
- 1. Tilt tip 15° from vertical position
- 2. Depress oxygen cutting lever
- 1. Continue cut until circle is complete

3. Return tip to vertical position as the cut starts and raise tip 1/4" to 1/2" above plate

FIGURE B

TEST

1.	Match th	ese terms with the correct definition	n.		
	a.	Term usually applied to	1.	Backfire	
		rust, corrosion, coating, film or scale	2.	Cutting	
	b.	Combining oxygen with	3.	Drag line	
		another substance	4.	Flashback	
	c.	Oxidation of metal with a cutting torch	5.	Kerf	
	d.	Metal container with a	6.	Oxide	
		layer of water or sand to catch hot slag	7.	Oxidizing	
	e.	Situation in which the most distant portion of the cutting stream lags behind the stream nearest the cutting tip	8.	Slag box	
	f.	Area where the metal was removed in the form of an oxide during the cutting process			
	g.	Fire inside the torch			
	h.	Momentary burning back of the flame into the tip			
2.	Name th	ne parts of the cutting tip.			
	a.				
	b.				
3.	Select th	he purposes of a slag box. Picce ar	"X"	before the corre	ct answers
	a.	Protect welding hoses			
	b	. Prevent oxidizing			
	C.	. Catch hot slag			
	d	. Prevent fire			

	e. Protect preheat orifice
٠	f. Protect clothing
4.	Select the reasons for poor cuts. Place an "X" in the blank.
	a. Improper pressure
	b. Poor slag box
	c. Inadequate preheat
	d. Insufficient oxygen
	e. Improper speed
5.	Select the causes of backfire. Place an "X" in the blank.
	a. Dirty tip
	b. Insufficient kerf
	c. Insufficient acetylene or oxygen pressure
	d. Fire inside the torch
	e. Overheating of cutting tip
	f. Loose cutting tip
6.	List two results of a backfire.
	a.
	b.
7.	Name two indications of a flashback.
	a.
	b.
8.	List step by step what should be done in case of a flashback.
	a.
	b.
	c.
	d.
	е.

- f.
- g.
- h.
- 9. Discuss the procedure that should be followed if a cut is lost.
- 10. Demonstrate the ability to:
 - a. Make 90° cuts in mild steel
 - b. Cut holes in mild steel

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

ANSWERS TO TEST

1. a. 6

- 6. a. Flame burns momentarily back into tip
 - b. A loud snap or pop results
- 7. Any two of these:
 - a. Fire inside torch
 - b. Flame disappears
 - c. Squealing or hissing noise inside torch
 - d. Sparks coming from the torch
 - e. Smoke coming from the torch
- 8. a. Close the oxygen preheat valve
 - b. Close the oxygen torch valve
 - c. Close acetylene torch valve
 - d. Release oxygen regulator screv-
 - e. Release acetylene regulator screw
 - f. Examine acetylene unit
 - g. Reset regulator pressures
 - h. Light the torch
- 9. Discussion should include these points:
 - a. Release the oxygen cutting lever
 - b. Preheat edge where cutting action was stopped
 - c. Continue cut
- 10. Performance skills will be evaluated to the satisfaction of the instructor.

OXYACETYLENE FUSION WELDING UNIT III

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to select the proper size welding tip according to manufacturer's recommendations and choose the correct filler rod for a welding job. He should be able to carry a puddle with or without a filler rod. This knowledge will be evidence through demonstration and by scoring eighty five percent on a unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match eight terms and definitions associated with oxyacetylene fusion welding.
- 2. Select from a list five factors that determine the quality of an oxyacetylene fusion weld
- 3. Name five properties of a good weld.
- 4. List two factors that determine the selection of tip size in oxyacetylene welding.
- 5. Name two factors that determine the type of filler rod to use in oxyacetylene welding.
- 6. Name the purpose of the filler rod.
- 7. Demonstrate the ability to:
 - Construct a corner weld without a filler rod.
 - b. Lay beads on a flat plate with and without a filler rod.
 - c. Construct a flat butt weld, using a filler rod.

OXYACETYLENE FUSION WELDING UNIT III

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Discuss terminal and specific objectives.
- D. Discuss information sheet.
- E. Demonstrate and discuss procedures outlined in the job sheets.
- F. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Job sheets
 - 1. Job Sheet #1--Make a Corner Weld Without Filler Rod
 - 2. Job Sheet #2--Lay Beads on Flat Plate Without Filler Rod
 - 3. Job Sheet #3--Lay Beads on Flat Plate With Filler Rod
 - 4. Job Sheet #4--Weld Butt Joints With Filler Rod
 - D. Test
 - E. Answers to test

OXYACETYLENE FUSION WELDING UNIT III

INFORMATION SHEET

I. Terms and definitions

- A. Fusion welding-The joining of pieces of metal by heating the adjoining edges to the fusion or melting point and allowing them to flow or run together and then cool
- B. Penetration-The distance from the original surface of the base metal to that point at which fusion ceases
- C. Base metal--The metal to be welded
- D. Alloy--A mixture with metallic properties composed of two or more elements of which at least one is a metal
- E. Inner cone--The inner white part of the neutral flame
- F. Backfire--A momentary burning back of the flame into the tip, flame goes out with a loud snap or pop
- G. Flashback--A fire inside one torch indicated by a hissing or squealing sound
- H. Tack weld--A small weld used for temporarily holding material in place
- II. Factors determining fusion weld quality
 - A. Proper flame adjustment
 - B. Angle of tip
 - C. Distance from work
 - D. Speed of travel
 - E. Movement of tip
- III. Properties of a good weld
 - A. Consistent width
 - B. Straightness
 - C. Slightly crowned
 - D. Fused into base metal
 - E. Clean appearance

INFORMATION SHEET

- IV. Factors determining tip size selection
 - A. Metal thickness
 - B. Size of welding rod
- V. Factors determining rod selection
 - A. Rod with similar properties as base metal
 - B. Thickness of metal

(NOTE: A general rule is to use a rod with a diameter equal to the thickness of the base metal.)

VI. Purpose of filler rod--To add strength to weld or joint

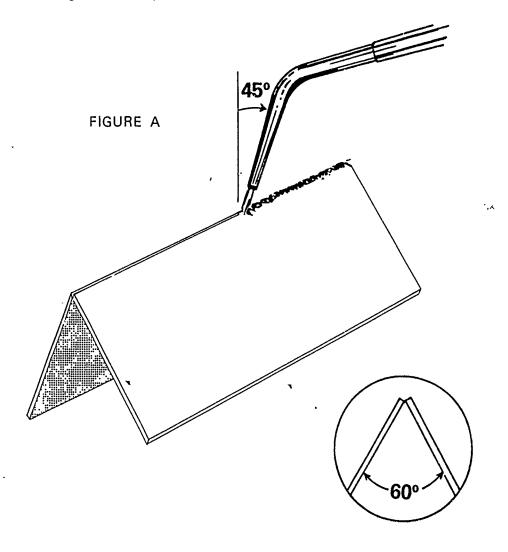

OXYACETYLENE FUSION WELDING UNIT III

JOB SHEET #1--MAKE A CORNER WELD WITHOUT FILLER ROD

- I. Tools and equipment
 - A. Oxyacetylene welding unit
 - B. Welding tip (according to manufacturer's recommendations)
 - C. Gloves
 - D. Goggles
 - E. Pliers
 - F. Wire brush
 - G. Flint lighter
 - H. Fire brick
- II. Materials--Two pieces of mild steel strips, 16 gauge 1 1/4" by 6"
- III. Procedure
 - A. Prepare metal for welding
 - B. Place metal in welding position (See Figure A.)
 - C. Turn on oxyacetylene unit
 - D. Set working pressure (according to manufacturer's recommendations)
 - E. Light torch and adjust to an oxidizing flame
 - F. Tack weld metal in position
 - G. Place inner cone about 1/16" to 1/8" from plate
 - H. Do not begin travel until you have established a molten puddle (a bright shiny spot)
 - I. Begin welding at right end
 - J. Hold tip vertically at 45° angle from direction of travel
 - K. Slowly weave flame from side to side across the weld or in small circles
 - L. Repeat process until instructor gives permission to go on to next job

IV. Diagram of the procedure

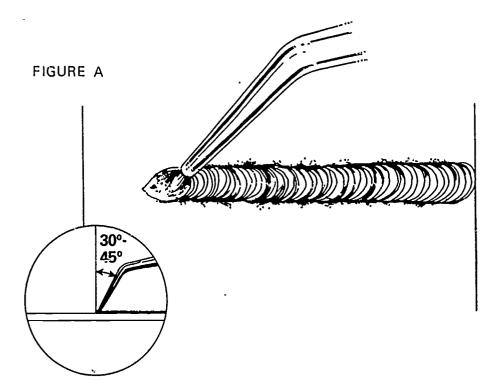

OXYACETYLENE FUSION WELDING UNIT III

JOB SHEET #2--LAY BEADS ON FLAT PLATE WITHOUT FILLER ROD

- I. Tools and equipment
 - A. Oxyacetylene welding unit
 - B. Welding tip (according to manufacturer's recommendations)
 - C. Gloves
 - D. Goggles
 - E. Pliers
 - F. Wire brush
 - G. Flint lighter
 - H. Fire brick
- II. Material--One piece of mild steel strip, 1/8" thick by 4" by 6"
- III. Procedure
 - A. Prepare metal for welding
 - B. Place metal in welding position
 - C. Turn on oxyacetylene unit
 - D. Set working pressure (according to manufacturer's recommendations)
 - E. Light torch and adjust to a neutral flame
 - F. Place inner cone about 1/16" to 1/8" from plate
 - G. Do not begin travel until you have established a molten puddle
 - H. Hold torch 30° to 45° from center in direction of travel
 - I. Slowly move the torch forward allowing the metal to melt
 - J. Repeat process until instructor gives permission to go on to next job

IV. Diagram of the procedure

OXYACETYLENE FUSION WELDING UNIT III

JOB SHEET #3--LAY BEADS ON FLAT PLATE WITH FILLER RQD

I. Tools and equipment

- A. Oxyacetylene welding unit
- B. Welding tip (according to manufacturer's recommendations)
- C. Gloves
- D. Goggles
- E. Pliers
- F. Wire brush
- G. Flint lighter
- H. Fire brick

II. Material

- A. One piece of mild steel strip, 16 gauge 1 1/4" by 6"
- B. Filler rod mild steel (according to manufacturer's recommendations)

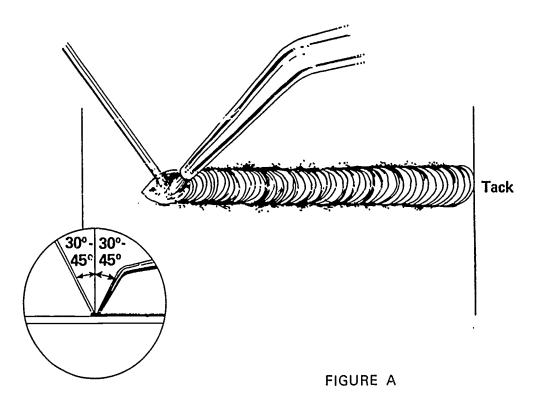

III. Procedure

- A. Prepare metal for welding
- B. Place metal in welding position
- C. Turn on oxyacetylene unit
- D. Set working pressure (according to manufacturer's recommendations)
- E. Light torch and adjust to a neutral flame
- F. Hold torch 30° to 45° from center
- G. Place inner cone about 1/16" to 1/8" from surface of puddle
- H. Do not begin travel until you have established a molten puddle
- I. Add filler rod to puddle in front of torch
- J. Move puddle forward with torch and allow puddle to form in base metal
- K. Add rod and withdraw rod as you move puddle forward

- L. Keep puddle the same size and shape the entire length of the bead
- M. Show bead to instructor when completed
- IV. Diagram of the procedure

OXYACETYLENE FUSION WELDING UNIT III

JOB SHEET #4-WELD BUTT JOINTS WITH FILLER ROD

I. Tools and equipment

- A. Oxyacetylene welding unit
- B. Welding tip (according to manufacturer's recommendations)
- C. Gloves
- D. Goggles
- E. Pliers
- F. Wire brush
- G. Flint lighter
- H. Fire brick

II. Materials

- A. Two pieces of mild steel strips, 16 gauge 1 1/4" by 6"
- B. Filler rod mild steel (according to manufacturer's recommendations)

III. Procedure

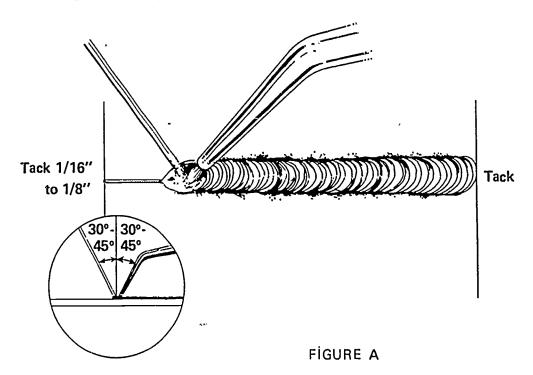

- A. Prepare metal for welding
- B. Place metal in welding position
- C. Turn on oxyacetylene unit
- D. Set working pressure (according to manufacturer's recommendations)
- E. Light torch and adjust to a neutral flame
- F. Tack weld metal together
- G. Hold torch 30° to 45° from center
- H. Do not begin travel until you have established a molten puddle
- I. Place inner cone about 1/16" to 1/8" from surface of puddle
- J. Add filler rod to puddle in front of torch
- K. Move puddle forward with torch and allow puddle to form in base metal

JOB SHEET #4

- L. Add rod and withdraw rod as you move puddle forward
- M. Keep puddle the same size and shape the entire length of the bead

IV. Diagram of the procedure

OXYACETYLENE FUSION WELDING UNIT III

ANSWERS TO TEST

1. a. 5

b. 7

c. 3

d. 1

e. 6

f. 2

g. 4

h. 8

2. a

С

е

f

g

3. a. Consistent width

b. Straightness

c. Slightly crowned

d. Fused into base metal

e. Clean appearance

4. a. Metal thickness

b. Size of welding rod

5. a. Rod with similar properties as base metal

b. Thickness of metal

6. To add strength to weld or joint

7. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to distinguish between braze and fusion welding and be able to list advantages and disadvantages of brazing. He should be able to demonstrate the procedures for applying flux to a filler rod and construct a butt weld using the brazing process. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on a unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match five terms and definitions associated with brazing.
- 2. Discuss the difference between braze and fusion welding.
- 3. Name three advantages of brazing.
- 4. Write two disadvantages of brazing.
- 5. Name two reasons for having a clean metal surface before brazing.
- 6. Name one way of removing oxides from a clean metal surface.
- 7. Name five purposes of flux.
- 8. Demonstrate the ability to construct a brazing butt weld joint.

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate the correct procedure of braze welding.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the proper procedure of braze welding.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- . C. Job Sheet #1--Braze a Butt Joint
 - D. Test
 - E. Answers to test

II. References:

- A. The Oxy-Acetylene Handbook: A Manual on Oxy-Acetylene Welding and Cutting Procedures. New York: Union Carbide Corporation, Linde Division, 1960.
- B. Aithouse, Andrew D., Carl H. Turnquist, and William A. Bowditch. Modern Welding. Homewood, Illinois: The Goodheart- Willcox Company, Inc., 1965.
- C. Giachino, J. W., William Weeks, and Elmer Brune. Welding Skills and Practices. Chicago, Illinois: American Technical Society, 1967.

INFORMATION SHEET

I. Terms and definitions

- A. Brazing--The uniting of two pieces of metal together to form one piece by the use of a bronze rod and flux
- B. Malleability--A property of metals which allows them to be bent cr permanently distorted without rupture
- C. Ductile--A term describing metal which is capable of being drawn or stretched out
- D. Tinning operation--The melting of a small amount of bronze rod onto the surface and allowing it to spread along the entire seam
- E. Flux--A chemical used to clean metals during the welding process

II. Braze and fusion welding

- A. Brazing--The joining of metals using bronze rod and flux
- B. Fusion--The melting of metals until the molten portions unite with each other

III. Advantages of brazing

- A. Main characteristics of base metal not destroyed
- B. Less gas consumed
- C. Can be used on thin metals
- D. Used on malleable casting
- E. May be used in joining different kinds of metals

IV. Disadvantages of brazing

- A. Cannot be used on metal where stress is a factor
- B. Expensive to use
- V. Reasons for clean metal surface
 - A. Bronze will stick easier
 - B. Allows bronze to flow smoothly and evenly over entire weld area
- VI. Removal of metal oxides--By use of flux

VII. Purposes of flux

- A. Chemically cleans the base metal
- B. Prevents oxidation of the filler rod
- C. Removes oxides from metal
- D. Increases flow of filler rod
- E. Brings filler metal into immediate contact with the metals being joined
- F. Permits filler metal to penetrate the pores of the base metal

JOB SHEET #1--BRAZE A BUTT JOINT

- I. Tools and equipment
 - A. Oxyacetylene welding unit
 - B. Gloves
 - C. Safety glasses
 - D. Goggles
 - E. Welding tip (according to manufacturer's recommendations)
 - F. Wire brush
 - G. Flint lighter
 - H. Fire brick

II. Materials

- A. Two pieces of mild steel strips, 1/8" thick, 1 1/4" by 6"
- B. Bronze filler rod (use according to manufacturer's recommendations)
- C. Welding flux

III. Procedures

- A. Prepare metal for brazing-clean
- B. Place metal in brazing position 1/16" to 1/8" apart
- C. Turn on oxyacetylene unit
- Adjust proper working pressure of oxygen and acetylene (use manufacturer's recommendations)
- E. Place metal on fire brick

(NOTE: Do not lay metal flat on brick; arrange metal so a small space will be between the base metal and the fire brick.)

- F. Light and adjust torch to a neutral flame
- G. Preheat the end of the brazing rod and dip in the flux or use fluxed rod
- H. Tack metal in place
- I. Heat the surface of the weld area slightly

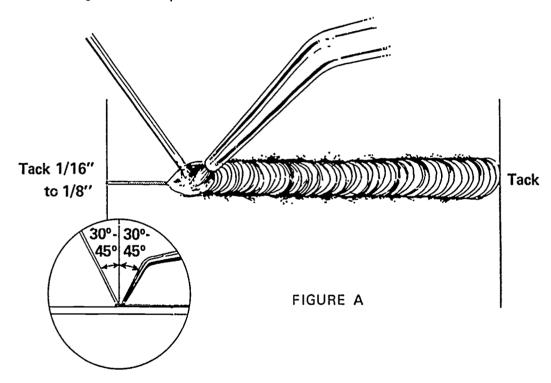

JOB SHEET #1

- J. Hold torch 30° to 45° from the center
- K. Melt a small amount of bronze rod onto the surface and allow it to spread along the entire seam when a cherry-red color occurs
- L. When the base metal is tinned sufficiently, start depositing the proper size bead
- M. Watch for base metal color

(NOTE: When metal is not hot enough, the bronze will form into drops; when metal is too hot, bronze tends to boil.)

- N. Complete the weld and practice doing others
- IV. Diagram of the procedure

TEST

1.	Match the following terms to the correct definition.								
	a.	The uniting of two pieces	1. Brazing						
		of metal together to form one piece by the use of a bronze rod	2.	Ductile					
	L	and flux	3.	Flux					
	D.	A property of metals which allows them to be bent or	4.	Malleability					
		permanently distorted without rupture	5.	Tinning operation					
	c.	A term describing metal which is capable of being drawn or stretched out							
	d.	The melting of a small amount of bronze rod onto the surface and allowing it to spread along the entire seam							
	e.	A chemical used to clean metals during the welding process							
2.	In what	way is brazing different from fusion v	velding?						
•									
3.	Name th	ree advantages of brazing.							
	a.								
	b.								
v	c.								
4.	Write tw	o disadvantages of brazing.							
	a.								
	b.								

5.	Name two reasons for having a clean metal surface before brazing.
	a.
	b.
6.	How would you remove oxides from a clean metal surface?
7.	Name five purposes of a flux.
	a.
	b.
	c
	d. · ·
	e.
8.	Demonstrate the ability to construct a brazing butt weld joint.
	(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

ANSWERS TO TEST

- 1. a. 1
 - b. 4
 - c. 2
 - d. 5
 - e. 3
- 2. The answer should include these points:
 - a. Brazing is the joining of metals using bronze rod and flux
 - b. Fusion is the melting of metals until the molten portions unite with each other
- 3. Any three of the following:
 - a. Main characteristics of base metal not destroyed
 - b. Less gas consumed
 - c. Can be used on thin metals
 - d. Used on malleable castings
 - e. May be used in joining different kinds of metals
- 4. a. Cannot be used on metal where stress is a factor
 - b. Expensive to use
- 5. a. Bronze will stick easier
 - b. Allows bronze to flow smoothly and evenly over entire weld area
- 6. By use of flux
- 7. Any five of the following:
 - a. Chemically cleans the base metal
 - b. Prevents oxidation of the filler rod
 - c. Removes oxides from metal
 - d. Increases flow of filler rod

- e. Brings filler metal into immediate contact with the metals being joined
- f. Permits filler metal to penetrate the pores of the base metal
- 8. Performance skills will be evaluated to the satisfaction of the instructor.

ARC WELDING UNIT. I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to identify welding equipment, types of welds, welding joints, and welding positions. He should be able to discuss methods and purposes of coating electrodes, reasons for poor welds, and safety precautions to use in arc welding. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match eight terms and definitions associated with arc welding.
- 2. Identify the common equipment needed in arc welding.
- 3. List two types of arc welders.
- 4. Select from a list the effects of raising or lowering the arc welding current.
- 5. List four types of electrodes.
- 6. List the two common sizes of electrodes.
- 7. Discuss the methods and purposes of coating electrodes.
- 8. Name the two methods of striking the arc.
- 9. Identify the three types of welds.
- 10. Identify five types of weld joints.
- · 11. Identify five welding positions.
 - 12. Discuss four reasons for poor welds.
 - 13. Discuss safety precautions to use in arc welding.

ARC WELDING UNIT I

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information sheet.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1--Arc Welding Equipment
 - 2. TM 2--E6011 Mild Steel Electrode
 - 3. TM 3--Types of Welds
 - 4. TM 4--Types of Welding Joints
 - 5. TM 5--Welding Positions
 - D. Test
 - E. Answers to test

II. References:

ARC WELDING UNIT I

INFORMATION SHEET

- I. Terms and definitions
 - A. Arc--Flow of electric current across a narrow gap
 - B. Base metal--Metal to be welded
 - C. Bead weld--Made by one pass of the electrode
 - D. Bevel--Type of edge preparation
 - E. Butt joint--Weld between two metal parts in the same plane
 - F. Crater--Depression at the end of a weld
 - G. Electrodes--Metal rods which conduct a current from the electrode holder to the base metal
 - H. Welding--Fusion of metals
- II. Arc welding equipment (Transparency 1)
 - A. Welder
 - B. Electrode holder with leads
 - C. Ground clamp with leads
 - D. Shield or helmet
 - E. Gloves
 - F. Chipping hammer
 - G. Safety goggles
 - H. Wire brush
 - I. Electrodes
- III. Types of arc welders
 - A. AC (alternating current) welder--Current alternating direction 120 times per second
 - B. DC (direct current) welder--Current flowing in the same direction

- IV. Effects of adjustments on the arc welder current
 - A. Raising amps--Produces more heat
 - B. Lowering amps--Produces less heat
- V. Types of electrodes (Transparency 2)
 - A. Mild steel
 - B. High carbon steel
 - C. Alloys
 - D. Hard surfacing
- VI. Common electrode sizes--Determined by diameter of bare end of electrode
 - A. 1/8"
 - B. 5/32"

(NOTE: Electrodes range in size from 1/16" to 3/8".)

- VII. Welding with coated electrodes--Called shielded arc welding
 - A. Methods of coating electrodes
 - 1. Wrapping
 - 2. Dipping (Electrodes are dipped into a liquid flux solution.)
 - 3. Extruding (This is the most common method.)
 - B. Purposes of electrode coating
 - 1. Stabilizes arc
 - 2. Shields molten puddle from air
 - 3. Floats impurities out of puddle
 - 4. Forms slag and slows cooling
 - 5. Increases speed and improves quality of welding

VIII. Methods of striking the arc

- A. Scratching (similar to striking a match)
 - 1. Move electrode at an angle across work
 - 2. Strike electrode to metal
 - 3. Pull electrode forward with sweeping motion
 - 4. Raise electrode slightly

B. Tapping

- 1. Hold electrode perpendicular to work
- 2. Lower electrode and tap lightly on work
- IX. Types of welds (Transparency 3)
 - A. Bead
 - B. Fillet
 - C. Groove
- X. Types of weld joints (Transparency 4)
 - A. Butt
 - B. Corner
 - C. Tee
 - D. Lap
 - E. Edge
- XI. Welding positions (Transparency 5)
 - A. Flat-Running a bead on a flat surface
 - B. Horizontal--Running a horizontal bead on a vertical surface
 - C. Vertical down-Running a vertical bead from top to bottom on a vertical surface

D. Vertical up-Running a vertical bead from bottom to top on a vertical surface

E. Overhead-Running a bead overhead on a horizontal surface

XII. Reasons for poor welds

- A. Machine adjustment too hot or too cool
- B. Electrode size too large or too small
- C. Improper movement of electrode
- D. Improper angle of holding the electrode
- E. Improper base metal preparation
- F. Arc length too short or too long

XIII. Safety precautions to be used in arc welding

- A. Never look at arc with the naked eye
- B. Use a head or face shield that is in good condition
- C. Wear suitable clothing to protect all parts of body
 - 1. Long-sleeved shirt
 - 2. Leather gloves -
 - 3. Collar buttoned
 - 4. Cuffs turned down
 - 5. High-topped shoes or boots
- Do not strike an arc or weld until sure those in the vicinity have protective equipment or will look in the other direction (Yell "COVER" before striking an arc.)
- E. Do not weld around combustible or flammable materials
- F. Do not pick up hot metal
- G. Do not weld in confined places without ventilation

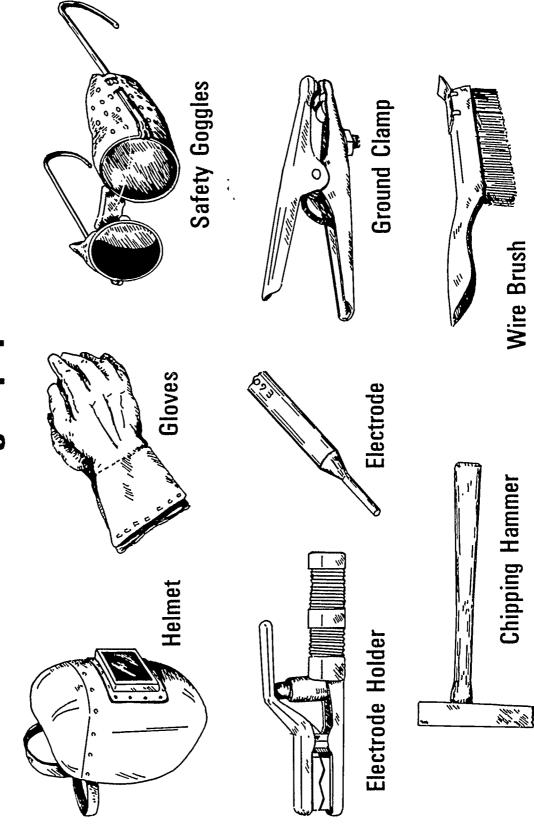

- H. Always shut off main switch or disconnect plug when checking over a welder
- I. Do not leave electrode holder on welding table or in contact with grounded metal surface
- J. Do not use worn or frayed cables
- K. Stand on dry footing when welding
- L. Keep area around welder clean
- M. Keep tools and metal in their proper locations

13. Discuss safety precautions to use in arc welding.

ARC WELDING UNIT I

ANSWERS TO TEST

- 1. a. 3
 - b. 7
 - c. 2
 - d. 8
 - e. 5
 - f. 1
 - g. 4
 - h. 6
- 2. a. Wire brush
 - b. Electrode
 - c. Helmet
 - d. Gloves
 - e. Chipping hammer
 - f. Goggles
 - g. Electrode holder
 - h. Ground clamp
- 3. a. AC (alternating current) welder
 - b. DC (direct current) welder
- 4. a. 1
 - b. 3
- 5. a. Mild steel
 - b. High carbon steel
 - c. Alloys
 - d. Hard surfacing

- 6. a. 1/8"
 - b. 5/??"
 - 7. Discussion should include:
 - a. Methods of coating electrodes
 - 1) Wrapping
 - 2) Dipping (Electrodes are dipped into a liquid flux solution.)
 - 3) Extruding (This is the most common method.)
 - b. Purposes of electrode coating
 - 1) Stabilizes arc
 - 2) Shields molten puddle from air
 - 3) Floats impurities out of puddle
 - 4) Forms slag and slows cooling
 - 5) Increases speed and improves quality of welding
- 8. a. Scratching
 - b. Tapping
- 9. a. Fillet weld
 - b. Groove weld
 - c. Bead weld
- 10. a. Tee joint
 - b. Lap joint
 - c. Corner joint
 - d. Edge joint
 - e. Butt joint
- 11. a. Flat
 - b. Vertical

- c. Horizontal
- d. Vertical down
- e. Overhead

12. Discussion should include:

- a. Machine adjustment too hot or too cool
- b. Electrode size too large or too small
- c. Improper movement of electrode
- d. Improper angle of holding the electrode
- e. Improper base metal preparation
- f. Arc length too short or too long

13. Discussion should include:

- a. Never look at arc with the naked eye
- b. Use a head or face shield that is in good condition
- c. Wear suitable clothing to protect all parts of body
 - 1) Long-sleeved shirt
 - 2) Leather gloves
 - 3) Collar buttoned
 - 4) Cuffs turned down
 - 5) High-topped shoes or boots
- d. Do not strike an arc or weld until sure those in the vicinity have protective equipment or will look in the other direction
- e. Do not weld around combustible or flammable materials
- f. Do not pick up hot metal
- g. Do not weld in confined places without ventilation
- h. Always shut off main switch or disconnect plug when checking over a welder
- i. Do not leave electrode holder on welding table or in contact with grounded metal surface

- j. Do not use worn or frayed cables
- k. Stand on dry footing when welding
- I. Keep area around welder clean
- m. Keep tools and metal in their proper locations

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to deposit beads in the flat, vertical, and horizontal positions using an E 6011 and/or E 6010 electrode. He should be able to construct a V butt weld in flat position and run a continuous bead without breaking the arc. This knowledge will be evidenced through demonstration and by scoring eighty five percent on a unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match ten terms used in position welding with their definitions.
- 2. List four factors that determine proper current adjustment.
- 3. List three reasons for removing slag from a bead.
- 4. Name three reasons for fusing one bead in with another.
- 5. List the four variables that determine weld quality.
- 6. Identify beads formed properly and improperly by telling what caused each one.
- 7. Demonstrate the ability to:
 - a. Start, stop, and restart a bead.
 - b. Construct a complete pad on 3/8" plate, 6" by 6", using E-6011 and/or E-6010 electrode paying special attention to proper fusion of lapping beads in the following positions:
 - 1) Flat
 - 2) Horizontal
 - 3) Vertical (up)
 - c. Make a V-butt weld in flat position.
 - d. Run a continuous bead.

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Make transparency.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedures outlined in the job sheets.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency master: TM 1--Properly and Improperly Formed Beads
- D. Job sheets
 - 1. Job Sheet #1--Start, Stop, and Restart a Bead
 - 2. Job Sheet #2--Make a Pad in the Flat Position
 - 3. Job Sheet #3--Make a Pad in the Horizontal Position

- 4. Job Sheet #4--Make a Pad in the Vertical (Up) Position
- 5. Job Sheet #5--Make a V-butt Weld
- 6. Job Sheet #6--Run a Continuous Bead
- E. Test
- F. Answers to test

INFORMATION SHEET

I. Terms and definitions

- A. Pads--The metal plates which have beads running parallel to each other in such a way that the beads are united with one another to form a solid mass
- B. Horizontal position--The running of a horizontal bead on a vertical surface
- C. Vertical position--The beads deposited in a vertical position on a horizontal surface
- D. Face-The exposed surface of a fusion weld
- E. Root-The bottom surface of a fusion weld
- F. Penetration-The distance from the original surface of the base metal to that point at which fusion ceases
- G. Undercutting--The portion of the crater left unfilled due to excessive current and the improper movement of the electrode occuring at the edge of the bead
- H. Porosity--A condition which is caused by the oxidation of a gas pocket trapped in a weld as it solidifies
- I. Crater--A depression in the face of a weld caused by arc force
- J. Fusion--The melting of metals until the molten portions unite with each other

II. Factors determining proper current adjustment

- A. Length of welding cables
- B. Thickness of base metal
- C. Diameter of electrode
- D. Welding technique used by operator
- E. Efficiency of welding machine and polarity
- F. Type of joint
- G. Welding positions

- III. Reasons for removing slag
 - A. Permits better fusion of beads
 - B. Prevents gas pockets from forming in bead
 - C. Improves appearance of bead
- IV. Reasons for fusing one bead in with another
 - A. Increases strength of weld
 - B. Improves appearance of bead
 - C. Improves penetration
- V. Variables that determine weld quality
 - A. Amperage
 - B. Length of arc
 - C. Speed of travel
 - D. Position of electrode
- VI. Causes of properly and improperly formed beads (Transparency 1)
 - A. Current, voltage, and speed normal
 - B. Current too low
 - C. Current too high
 - D. Voltage too low
 - E. Voltage too high
 - F. Speed too slow
 - G. Speed too fast

Speed slow

Voltage low

Current low

Properly and Improperly Formed Beads

JOB SHEET #1--START, STOP, AND RESTART A BEAD

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers or vise grips
- II. Materials
 - A. Mild steel metal 3/8" thick, 6" x 6"
 - B. E-6011 or E-6010 electrode
- III. Procedure
 - A. Start
 - 1. Hold electrode perpendicular to work
 - 2. Slant electrode 10° to 15° in direction of travel
 - 3. Lower electrode and strike lightly on edge of plate
 - 4. Raise electrode as arc strikes
 - 5. Lower electrode to shorten arc
 - 6. As desired crater develops, move electrode out slowly with normal movement
 - 7. Move electrode to build up desired height and width of bead
 - B. Stop
 - 1. As weld length is reduced, return electrode perpendicular to work
 - 2. Lower electrode to shorten arc
 - 3. Move electrode to build up crater and remove impurities
 - 4. Raise electrode quickly to break arc
 - 5. Development of desired bead

JOB SHEET #1

C. Restart

- 1. Start arc about 1/2" to 1" in front of crater
- 2. Use long arc movement back to within 1/16" of the crater crown
- 3. Bring electrode down rapidly
- 4. Continue welding maintaining correct width of bead

JOB SHEET #2--MAKE A PAD IN THE FLAT POSITION

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers or vise grips
- II. Materials
 - A. Mild steel metal 3/8" thick, 6" by 6"
 - B. E-6011 or E-6010 electrode

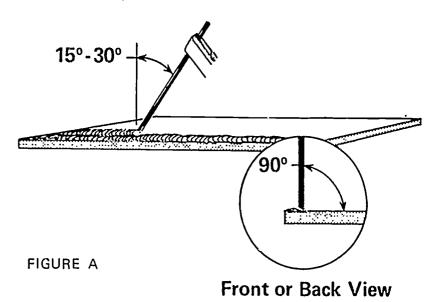

III. Procedure

- A. Prepare metal for welding
- B. Place metal in proper welding position
- C. Strike arc and begin welding
- D. Hold electrode at a 15° to 30° angle in direction of travel
- E. After completion of one bead, chip and brush clean
- F. Check bead and surface for
 - 1. Surface appearance
 - 2. Pinholes, crater holes, slag holes, or improper starts and stops
 - 3. Determine if current or amps need to be changed
- G. Continue running beads overlapping at least the first one-third of the previous head
- H. Clean each pass before running next bead
- I. Fuse each pass with base metal and prior bead
- J. Overlapping beads should produce a smooth surface without "valleys" between passes

JOB SHEET #2

- K. Continue welding until pad is filled with beads
- L. Clean metal and turn in to the instructor for grading
- IV. Diagram of the procedure

JOB SHEET #3-MAKE A PAD IN THE HORIZONTAL POSITION

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers or vise grips
- II. Materials
 - A. Mild steel metal 3/8" thick, 6" by 6"
 - B. E-6011 or E-6010 electrode

III. Procedure

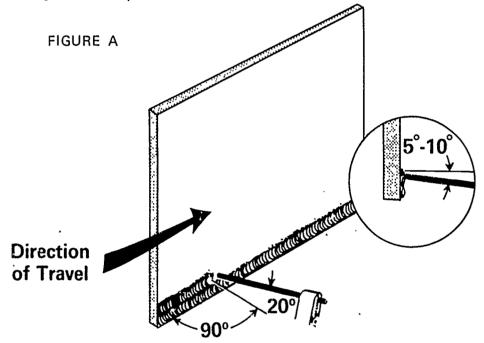

- A. Prepare metal for welding
- B. Place metal in proper welding position
- C. Hold electrode 20° away from deposited bead in direction of travel
- D. Point electrode upward 5° to 10°
- E. Strike arc and begin welding
- F. Move electrode to prevent sagging and causing an overlap and undercutting
- G. Run a straight bead along the bottom side
- H. After laying one bead, chip and brush clean
- I. Check bead and surface
 - 1. Surface appearance
 - 2. Pinholes, crater holes, slag holes, or improper starts and stops
 - 3. Determine by appearance if current and amps need to be changed
- J. Continue running beads overlapping at least the first one-third of the previous bead

JOB SHEET #3

- K. Clean each pass before overlapping
- L. Fuse each pass with base metal and other bead
- M. Overlapping beads should produce a smooth surface without "valleys" between passes
- N. Continue welding until pad is filled with beads
- O. Clean metal and turn in to the instructor for grading

III. Diagram of the procedure

JOB SHEET #4-MAKE A PAD IN THE VERTICAL (UP) POSITION

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helment, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers or vise grips
- II. Materials
 - A. Mild steel metal 3/8" thick, 6" by 6"
 - B. E-6011 or E-6010 electrode

III. Procedure

- A. Prepare metal for welding
- B. Place metal in proper welding position
- C. Hold electrode 10° to 15° with the horizontal surface
- D. Strike arc and begin welding
- E. Move tip of the electrode upward in the direction of the weld (NOTE: Some type of "pattern" should be used such as circular or triangular movement.)
- F. Run a straight bead
- G. After laying one bead, chip and brush clean
- H. Check bead and surface
 - 1. Surface appearance
 - 2. Pinholes, crater holes, slag holes, or improper starts and stops
 - Determine by appearance if current and amps need to be changed
- I. Continue running beads overlapping at least the first one-third of the previous bead
- J. Clean each pass before overlapping

JOB SHEET #4

K. Fuse each pass with base metal and other bead

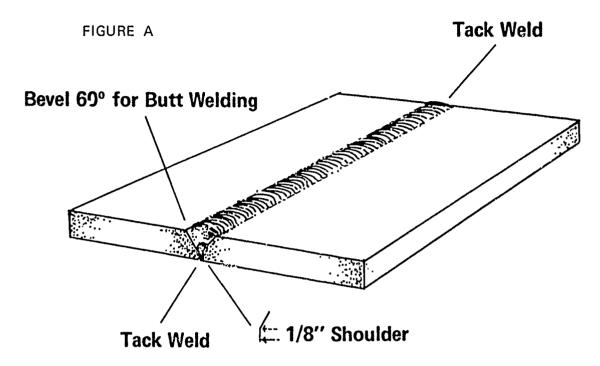

JOB SHEET #5--MAKE A V-BUTT WELD

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Grinder
 - E. Wire brush
 - F. Pliers
 - G. Steel tape
- II. Materials
 - A. Two pieces of steel plate 5" long by 3" wide by 3/8" thick
 - B. E-6011 or E-6010 electrode
- III. Procedure
 - A. Prepare metal for welding
 - 1. Bevel edges of metal 60° (See Figure A.)
 - 2. Place two pieces together parallel to each other
 - 3. Metal should be spaced 3/32" to 1/8"
 - 4. Tack weld pieces together at both ends
 - 5. Place metal in proper position
 - B. Weld pieces together using a single pass
 - C. Chip slag and brush clean
 - D. Turn in to instructor for grading

JOB SHEET #5

IV. Diagram of the procedure

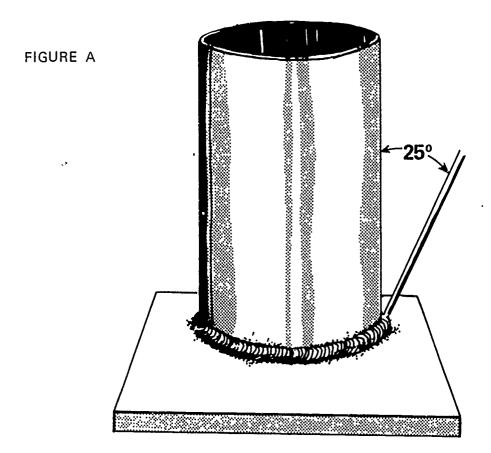

JOB SHEET #6--RUN A CONTINUOUS BEAD

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers
- II. Materials
 - A. Mild steel plate 4" long by 4" wide by 1/8" to 3/8" thick
 - B. Black pipe nipple 4" long by 3/4" to 2" in diameter
- III. Procedure
 - A. Place nipple near center of plate
 - B. Place metal in proper welding position
 - C. Start weld at position shown in diagram
 - D. Hold electrode 25° from nipple(NOTE: This is to keep excessive heat off the nipple.)
 - E. Strike arc and continue welding without breaking arc
 - F. Chip slag and brush clean
 - G. Turn in to instructor for grading

JOB SHEET #6

IV. Diagram of the procedure

TEST

Match the	e following terms with the correct	definition	on.
a.	Bottom surface of a fusion weld	1.	Pads
•		2.	Horizontal position
b.	Distance from the original surface of the base metal to that point at which fusion ceases	3.	Face
		4.	Root
c.	Running a horizontal bead on a vertical surface	5°.	Vertical position
Д	Exposed surface of a fusion weld	6.	Penetration
		7.	Undercutting
e.	Metal plates which have beads running parallel to each other in such a way that the beads are united with one another to form a solid mass	8.	Porosity
		9.	Crater
		10.	Fusion
f.	Portion of the crater left unfilled due to excessive current and the improper movement of the electrode occuring at the edge of the bead		
g.	Beads deposited in a vertical position on a horizontal surface		
h.	Melting metals until the molten portions unite with each other		
i.	Depression in the face of a weld caused by arc force		
j.	Condition caused by the oxidation of a gas pocket trapped in a weld as it solidifies		

	e g
a.	b d
6.	 d. Identify the following examples of properly and improperly formed beads by telling what caused each one.
	c.
	b.
	a.
5.	What are the four variables that determine weld quality?
	c.
	b.
	a.
4.	Name three reasons for fusing one bead in with another.
	c.
	b.
	a.
3.	List three reasons for removing slag from a bead.
	d.
	c.
	b.
••	a.
' .	List four factors which determine proper current adjustments.

- 7. Demonstrate the ability to:
 - a. Start, stop, and restart a bead.
 - b. Construct a pad in the flat, horizontal, and vertical (up) positions.
 - c. Make a V-butt weld.
 - d. Run a continuous bead.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

ANSWERS TO TEST

- 1. a. 4
 - b. 6
 - c. 2
 - d. 3
 - e. 1
 - f. 7
 - g. 5
 - h. 10
 - i. 9
 - j. 8
- 2. Any four of the following:
 - a. Length of welding cables
 - b. Thickness of base metal
 - c. Diameter of electrode
 - d. Welding technique used by operator
 - e. Efficiency of welding machine and polarity
 - f. Type of joint
 - g. Welding positions
- 3. a. Permits better fusion of beads
 - b. Prevents gas pockets from forming in bead
 - c. Improves appearance of bead

- 4. a. Increases strength of weld
 - b. Improves appearance of bead
 - c. Improves penetration
- 5. a. Amperage
 - b. Length of arc
 - c. Speed of travel
 - d. Position of electrode
- 6. a. Current too high
 - b. Current too low
 - c. Speed too fast
 - d. Current, voltage, and speed normal
 - e. Voltage too low
 - f. Altage too high
 - g. Fpeed too slow
- 7. Performance skills will be evaluated to the satisfaction of the instructor.

ENGINE OPERATION UNIT I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to match terms and definitions associated with small engines. He should be able to identify operating positions, valve parts, and valve failures and describe the operation and use of small engines. He should be able to disassemble and reassemble a small gasoline engine. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match terms and definitions associated with small gasoline engine repair.
- 2. Match the names with the parts of a small engine when given a drawing of the engine.
- 3. Name five machines that are powered by a small gasoline engine.
- 4. Identify the three basic operating positions on small gasoline engines.
- 5. Name and describe the four principal events in the operation of a four-cycle engine.
- 6. Distinguish between a two-stroke cycle engine and a four-stroke cycle engine
- 7. Name three advantages of an air-cooled engine.
- 8. Name the simple rule for testing compression.
- 9. Match the names with the parts of a valve when given a drawing illustrating the parts.
- 10. Identify three types of valve failure when given a drawing showing each type.
- 11. Complete an engine inspection chart.
- 12. Demonstrate the ability to:
 - a. Disassemble a small gasoline engine.
 - b. Reassemble a small gasoline engine.

ENGINE OPERATION UNIT I

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information, job, and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Demonstrate and discuss procedures outlined in the job sheets.
- G. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheets.
- C. Complete assignment sheet and turn in to instructor.
- D. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- E. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:

ENGINE OPERATION UNIT I

INFORMATION SHEET

I. Terms and definitions

- A. B.D.C. (Bottom dead center)--Lowest position the piston can go
- B. Combustion--The process of burning fuel and air
- C. Compression: The pressing or squeezing together of the fuel and air in an engine
- D. Gasket--Anything used as a packing, such as a non-metallic substance, placed between two metal surfaces to act as a seal
- E. Governor-A device consisting of a control which is used to regulate engine speed
- F. Score--A scratch, ridge, or groove marring a finished surface
- G. Spark gap--The space between the electrodes of a spark plug through which the spark jumps
- H. Stroke--The total distance traveled by the piston in either direction
- I. T.D.C. (Top dead center)--Highest position the piston can go

II. Small engine parts (Transparency 1)

- A. Air cleaner--The device which filters the air to be mixed with the fuel in the engine
- B. Cam-The device which rotates to raise and lower the valves
- C. Camshaft--The shaft containing lobes or cams to operate the engine
- D. Carburetor--A device for automatically mixing fuel in the proper proportion with air to produce a combustible gas
- E. Combustion chamber--The volume of the cylinder above the piston with the piston on top dead center
- F. Condenser--A device for temporarily collecting and storing a surge of electrical current for later discharge
- G. Connecting rod--A rod that connects the piston to the crankshaft

- H. Crankcase--The housing in which the crankshaft and many other parts of the engine operate
- Crankshaft--The main shaft of the engine which, in conjunction with the connecting rods, changes the reciprocating motion of the pistons into rotary motion
- J. Cylinder--A round hole having some depth bored to receive a piston also sometimes referred to as bore or barrel
- K. Cylinder block-The largest single part of an engine; the basis or main mass of metal in which the cylinders are bored or placed
- L. Cylinder head-A detachable portion of an engine fastened securely to the cylinder block which contains all or a portion of the combustion chamber
- M. Exhaust valve--A valve which permits the remains of the burned fuel to leave the chamber
- N. Fuel tank-The device which contains the fuel to be burned in the engine
- O. Flywheel--A heavy wheel which maintains the speed of the engine while it is running
- P. Intake valve-A valve which permits a fluid or gas to enter the chamber and seals the exit
- Q. Oil filler plug--The device which closes the opening where the crankcase is filled with oil
- R. Piston--A cylindrical part closed at one end which is connected to the crankshaft by the connecting rod
- S. Piston head--The part of the piston above the rings
- T. Piston ring--An expanding ring placed in the grooves of the piston to provide a seal to prevent the passage of fluid or gas past the piston
- U. Spark plug-A device inserted into the combustion chamber of an engine containing an insulated control electrode for conducting current
- V. Valve-A device for opening and closing the openings that admit the air and gas mixture into the cylinder
- III. Machines powered by small engine
 - A. Motorcycles
 - B. Chain saws

- C. Mowers
- D. Outboard motors
- E. Pumps
- F. Posthole diggers
- G. Elevators
- IV. Operating postions (Transparency 2)
 - A. Vertical
 - B. Horizontal
 - C. Multi-position
- V. Events of a 4-cycle engine (Transparency 3)
 - A. Intake stroke
 - 1. Exhaust valve is closed
 - 2. Intake valve is open
 - 3. The piston moves downward and the air-fuel mixture is drawn into the cylinder
 - B. Compression
 - 1. Intake valve closes
 - 2. Piston moves upward
 - 3. The air-fuel mixture is compressed
 - C. Power
 - 1. Spark occurs igniting the mixture
 - 2. Forces of expanding gases push the piston down
 - D. Exhaust
 - 1. Exhaust valve opens
 - 2. Upward movement of piston forces the burned gases out of the cylinder

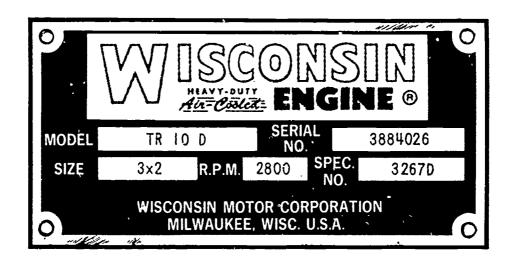

- 3. Exhaust valve closes
- 4. Cycle is repeated

VI. Engines

- A. 4-cycle
 - 1. Two revolutions of crankshaft per firing
 - 2. Lubricated from crankcase oil in the sump
- B. 2-cycle (Transparency 4)
 - 1. One revolution of crankshaft per firing
 - 2. Lubricated from oil mixed with the gasoline
- VII. Advantages of air-cooled engines
 - A. No need for complicated cooling system
 - B. Lighter in weight and occupies less space
 - C. Easy to repair
- VIII. Testing compression-Give the flywheel a quick spin and if it rebounds on the compression stroke, the compression is at least good enough to start the engine
 - IX. Parts of a valve (Transparency 5)
 - A. Head
 - .B. Margin
 - C. Seat
 - D. Face
 - E. Stem
 - F. Valve guide
 - X. Valve failures (Transparency 6)
 - A. Burned
 - B. Necked
 - C. Dished

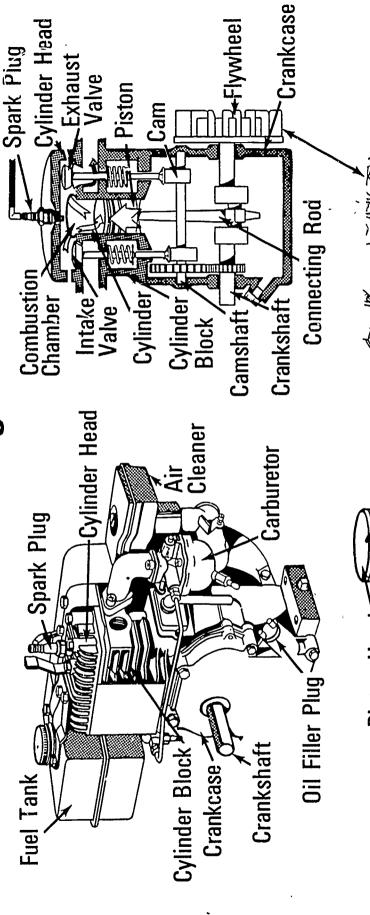

- XI. Information found on name plate
 - A. Make of engine
 - B. Model number
 - C. Serial number
 - D. Specification number
 - E. Size
 - F. RPM

ENGINE OPERATION UNIT I

JOB SHEET #1-DISASSEMBLE A SMALL GASOLINE ENGINE

- I. Tools and materials needed
 - A. 4-cycle engine
 - B. 3/8" drive socket set
 - C. Combination wrench set
 - D. Standard screwdriver
 - E. Soft mallet
 - F. Adjustable wrench
 - G. Punches
 - H. Ring compressor
 - I. Flywheel puller
 - J. Starter wrench
 - K. Flywheel holder
 - L. Spring compressor
 - M. Container for holding parts
- II. Procedure
 - A. Drain oil
 - B. Remove air cleaner stud and wing nut
 - C. Remove fuel line
 - D. Remove carburetor and linkage
 - E. Remove carburetor intake elbow
 - F. Remove muffler if necessary
 - G. Check space between carburetor bodies on two-piece carburetor
 - H. Remove shroud and check rewind starter

JOB SHEET #1

- I. Check compression
- J. Remove spark plug
- K. Check air gap, armature to flywheel
- L. Remove governor blade
- M. Remove breather assembly
- N. Remove cylinder head and shield
- O. Check tappet clearance
- P. Remove valves and springs
- Q. Remove starter pulley or clutch
- R. Remove flywheel
- S. Remove breaker point cover
- T. Check contact point gap
- U. Remove breaker points and check plunger hole
- V. Check end play
- W. File burrs from crankshaft power take-off end
- X. Remove base or sump
- Y. Remove oil slinger and bracket
- Z. Remove cam gear
- AA. Remove tappets
- BB. Remove connecting rod and piston
- CC. Remove crankshaft
- DD. Test condenser
- EE. Test coil
- FF. Check cylinder bore, valve guides, and bearings
- GG. Remove piston from connecting rod

JOB SHEET #1

- HH. Check piston, rings, and piston pin
- II. Reface valves
- JJ. Re-seat valve seats

ENGINE OPERATION UNIT I

JOB SHEET #2--REASSEMBLE A SMALL: GASOLINE ENGINE

- I. Tools and materials needed
 - A. 3/8" drive socket set
 - B. Combination wrench set
 - C. Standard screwdriver
 - D. Soft mallet
 - E. Adjustable wrench
 - F. Punch
 - G. Ring compressor
 - H. Starter wrench
 - I. Flywheel holder
 - J. Spring compressor

II. Procedure

- A. Install crankshaft
- B. Assemble piston pin and connecting rod
- C. Assemble rings to piston
- D. Install piston and connecting rod assembly
- E. Install tappets
- F. Install cam gear
- G. Install oil slinger, gear, and bracket
- H. Install base or sump with gasket
- I. Check and adjust end play
- J. Install points, adjust gap, and clean
- K. Install point cover

JOB SHEET #2

- L. Install flywheel
- M. Install starter pulley or clutch
- N. Install governor blade
- O. Adjust armature air gap
- P. Check spark
- Q. Adjust valve tappet clearance
- R. Install valves, springs, and retainers
- S. Recheck valve tappet clearance
- T. Install breather assembly
- U. Install cylinder head and shield
- V. Test, clean, gap, and install spark plug
- W. Check compression
- X. Install muffler
- Y. Install carburetor and linkage
- Z. Check and align governor
- AA. Install shroud housing
- BB. Install fuel pipe
- CC. Fill with oil
- DD. Adjust carburetor
- EE. Start engine

ENGINE OPERATION UNIT I

 - c. 1
 - d. 4
 - e. 6
 - f. 5
- 10. a. Necked
 - b. Burned
 - c. Dished
- 11. 12. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to match terms and definitions associated with servicing small engines. He should be able to identify the different types of air cleaners, fuel strainers, and carburetors and demonstrate skills in servicing small gasoline engines. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match five terms and definitions associated with servicing small engines.
- 2. Name three solutions used in cleaning an engine.
- 3. Identify given types of air cleaners.
- 4. Identify given types of fuel filters.
- 5. Identify given types of carburetors.
- 6. Demonstrate the procedures for performing the following jobs:
 - a. Clean and inspect crankcase and accessories.
 - b. Clean and inspect cooling system.
 - c. Service air cleaners.
 - d. Service fuel filters.
 - e. Clean crankcase breather.
 - f. Change crankcase oil.
 - g. Check spark plug for proper operation.
 - h. Clean and service spark plugs.

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedures outlined in job sheets.
- G. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheets.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency masters
 - 1. TM 1--Types of Air Cleaners
 - 2. TM 2--Types of Fuel Filters
 - 3. TM 3--Types of Carburetors

D. Job sheets

- 1. Job Sheet #1--Clean and Inspect Crankcase and Accessories
- 2. Job Sheet #2--Clean and Inspect Cocling System
- 3. Job Sheet #3--Service Oil-Bath Air Cleaner
- 4. Job Sheet #4--Service Oil-Filter Air Cleaner
- 5. Job Sheet #5--Service Dry-Filter Air Cleaner
- 6. Job Sheet #6--Service Sediment-Bowl Fuel Filter
- 7. Job Sheet #7--Service Screen-Type Fuel Filter
- 8. Job Sheet #8--Service Crankcase Breather
- 9. Job Sheet #9--Change Crankcase Oil
- 10. Job Sheet #10--Check Spark Plug for Proper Operation
- 11. Job Sheet #11--Service Spark Plugs
- E. Test
- F. Answers to test

INFORMATION SHEET

I. Terms and definitions

- A. Butterfly (throttle) valve--A device located in the manifold which controls the fuel and air
- B. Choke valve-A gate or valve which allows passage of gas or fluid in one direction only
- C. Spark gap--The space between the electrodes of a spark plug through which the spark jumps
- Detonation or knock--A hammering force on the piston rather than a uniform pushing force
- E. Air cleaner--A device for filtering, cleaning, and removing dust from the air admitted to a unit such as an engine

II. Engine cleaning solutions

- A. Commercial solvent called degreaser
- B. Petroleum solvents
 - 1. Kerosene
 - 2. Diesel fuel
- C. Live steam
- III. Types of air cleaners (Transparency 1)
 - A. Oil-bath
 - B. Oil-filter
 - C. Dry-filter
- IV. Types of fuel filters (Transparency 2)
 - A. Combination screen and sediment bowl
 - B. Screen in fuel tank
 - C. Screen at end of fuel pickup hose

INFORMATION SHEET

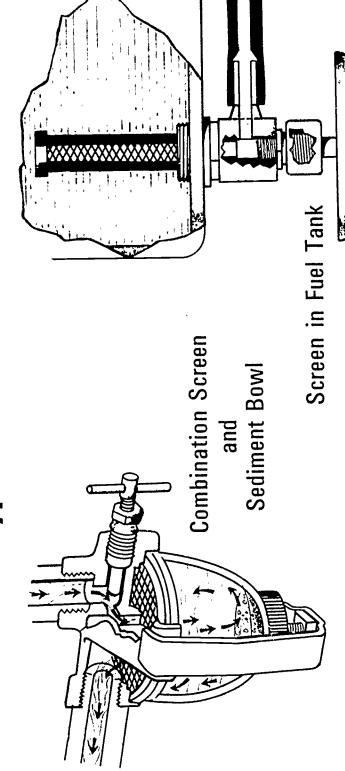

- V. Types of carburetors (Transparency 3)
 - A. Float
 - B. Suction-lift
 - C. Diaphragm

Types of Air Cleaners Oil-Bath

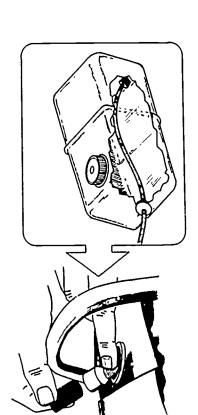

Types of Fuel Filters

Strainer on Fuel Pick-up Hose

Types of Carburetors

JOB SHEET #1--CLEAN AND INSPECT CRANKCASE AND ACCESSORIES

- I. Tools and materials needed
 - A. Standard screwdrivers 4" and 6"
 - B. Phillips screwdrivers 4" and 6"
 - C. Socket set including:
 - 1. 3/8"
 - 2. 7/16"
 - 3. 1/2"
 - 4. 5/8"
 - 5. 9/16"
 - 6. 3/8" ratchet
 - D. Open-end wrenches same as sockets
 - E. Wire brush
 - F. Empty pan for cleaning
 - G. Paint brush
 - H. Water hose with nozzle
 - I. Scraper or putty knife
 - J. Solvent
 - K. Hand spray

(NOTE: Do not use gasoline for cleaning an engine. It is highly flammable and an extreme fire hazard. If a degreaser is used, check the instructions on the can.)

- II. Procedures
 - A. Allow the engine to cool if it has been running
 - B. Remove the blower shroud and cylinder baffles

JOB SHEET #1

- C. Inspect for oil and fuel leaks
- D. Remove air-cleaner and cover air-cleaner opening

(NOTE: Cover carburetor intake with a piece of plastic sheeting. Use a rubber band to hold plastic in place.)

- E. Clean the exhaust system
- F. Apply solvent on areas that need cleaning

(NOTE: Apply with a paint brush or hand sprayer until you notice a thin, well-distributed film.)

- G. Allow solvent to set approximately five minutes
- H. Remove solvent from the engine surface
 - 1. If you used a degreaser, apply a strong stream of water
 - 2. If you used a petroleum solvent, remove with a strong soap solution
- I. Check for areas that have been missed
- I. Remove protective covers
- K. Replace carburetor air-cleaner
- L. Start engine and operate for three to five minutes

JOB SHEET #2--CLEAN AND INSPECT COOLING SYSTEM

- I. Tools and materials needed
 - A. Standard screwdrivers 4" and 6"
 - B. Phillips screwdrivers 4" and 6"
 - C. Socket set
 - D. Open-end wrench set
 - E. Wire brush
 - F. Scraper or putty knife
- II. Procedures
 - A. Close the fuel shut-off valve

(NOTE: Not all engines have shut-off valves. If there is one, it may be either a part of the sediment bowl or a single unit.)

- B. Remove fuel tank if necessary for removing the flywheel shroud
- C. Remove the recoil starter or screened sheave if equipped with a self-starter
- D. Remove the blower shroud
- E. Remove remaining baffles and deflectors that direct air from shroud and over end area of cylinder

(NOTE: Do not operate the engine with the shroud and baffles removed.)

- F. Clean inside of shroud and baffles with a small bristle brush or a putty knife
- G. Clean intake screen by washing in solvent
- H. Clean dirt from cylinder fins
- I. Clean dirt from blower flywheel fins
- J. Inspect engine for cracks, blemishes, and broken parts
- K. Reassemble parts in reverse order

JOB SHEET #3-SERVICE OIL-BATH AIR CLEANER

- I. Tools and materials needed
 - A. Standard screwdrivers 4" and 6"
 - B. Phillips screwdrivers 4" and 6"
 - C. Container for washing parts
 - D. Clean rags
 - E. Wooden scraper
 - F. Paint brush
 - G. Solvent

(NOTE: Do not use gasoline, naptha, or benzine. They are extremely flammable.)

II. Procedures

- A. Disconnect the spark plug wire
- B. Loosen oil cup or cover, and remove the air cleaner
 - 1. Secured by bail wire
 - 2. Secured by wing nut
 - 3. Secured by threaded stud
- C. Cover the exposed air intake
- D. Check depth of sediment deposit in bottom of oil cups
- E. Throw away dirty oil
- F. Clean cup, filter, and other parts with solvents
- G. Check air intake pipe to the carburetor for dirt accumulation
- H. Refill cap with oil to oil level
- I. Remove cover from intake
- J. Assemble the air cleaner; install and tighten
- K. Reconnect the spark plug wire

JOB SHEET #4--SERVICE OIL-FILTER AIR CLEANER

- I. Tools and materials needed
 - A. Standard screwdrivers 4" and 6"
 - B. Phillips screwdrivers 4" and 6"
 - C. Container for washing parts
 - D. Clean rags
 - E. Soap
 - F. Paint brush
- II. Procedures
 - A. Disconnect the spark plug wire
 - B. Clean area around air cleaner
 - C. Remove filter element cover
 - D. Remove filter element
 - E. Check condition of the filter element and other parts of the air cleaner
 - F. Cover carburetor air intake
 - B. Clean filter
 - H. Dry filter element
 - I. Remove protective cover from the carburetor intake
 - J. Clean the carburetor intake
 - K. Oil the filter element with a few drops of oil
 - L. Install filter element
 - M. Install cover
 - N. Reconnect spark plug wire

JOB SHEET #5-SERVICE DRY-FILTER AIR CLEANER

- I. Tools and materials needed
 - A. Standard screwdrivers 4" and 6"
 - B. Phillips screwdrivers 4" and 6"
 - C. Clean rags

II. Procedures

- A. Disconnect the spark plug wire
- B. Clean the area around the air cleaner
- C. Remove the filter element cover
- D. Remove the air filter element
- E. Cover the carburetor air intake with cloth or plastic
- F. Check condition of filter element and other parts
- G. Clean air filter element

(NOTE: If filter element is paper, clean by tapping it on a fiat surface.)

(CAUTION: Do not wash it unless instructed to do so by the manufacturer.)

- H. Remove protective cover from the carburetor intake
- I. Clean filter cover and carburetor intake
- J. Replace filter element
- K. Replace cover
- L. Reconnect spark plug wire

JOB SHEET #6--SERVICE SEDIMENT-BOWL FUEL FILTER

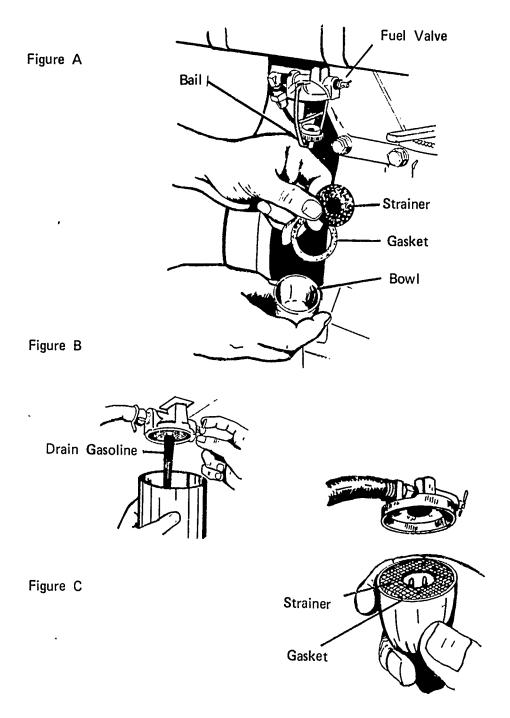

- I. Tools and materials needed
 - A. Open-end wrenches 7/16" and 1/2"
 - B. Combination pliers
 - C. Solvents
 - D. Pan for cleaning parts
 - E. Cleaning rags
 - F. New gasket for glass bowl
- 11. Procedures
 - A. Disconnect spark plug wire
 - B. Close fuel shut-off valve
 - C. Loosen jam nut and swing the wire bail to one side (Figure A)
 - D. Remove bowl with a twisting motion (Figure A)
 - E. Remove gasket (Figure A)
 - F. Remove strainer (filter) screen (Figure A)
 - G. Wash the screen or filter element
 - H. Clean and then dry sediment bowl
 - I. Open fuel valve and drain out approximately a cup of fuel (Figure B) (NOTE: Collect fuel in can to avoid a fire hazard.)
 - J. Install gasket, strainer, and sediment bowl (Figure C)
 - K. Fill the sediment bowl before tightening the jam nut
 - L. Tighten bowl against gasket with jam nut
 - M. Check for leaks before operating engine

JOB SHEET #6

- N. Reconnect spark plug wire to spark plug
- O. Operate engine for a few minutes and recheck for leaks

III. Diagram of procedure

JOB SHEET #7--SERVICE SCREEN-TYPE FUEL FILTER

- I. Tools and materials needed
 - A. Open-end wrenches 7/16" and 1/2"
 - B. Combination pliers
 - C. Solvent
 - D. Pan for cleaning parts
 - E. Cleaning rags
- II. Procedures
 - A. Disconnect the spark plug wire
 - B. Close fuel shut-off valve (if one is installed)
 - C. Remove fuel line from tank
 - D. Remove fuel shut-off valve and/or fuel filter (strainer) from fuel tank if possible
 - E. Clean fuel strainer
 - F. Replace fuel strainer assembly in reverse order of removal
 - G. Reconnect spark plug wire to spark plug

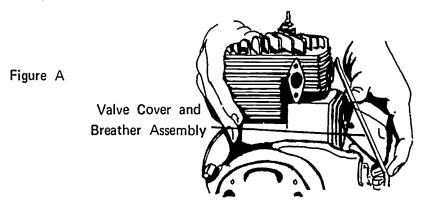

JOB SHEET #8-SERVICE CRANKCASE BREATHER

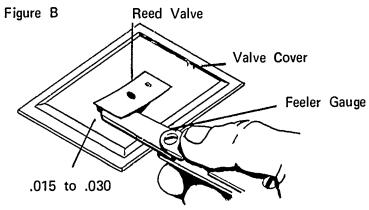

- I. Tools and materials needed
 - A. Open-end wrenches 7/16" and 1/2"
 - B. Standard screwdriver 8"
 - C. Combination pliers
 - D. Clean rags
 - E. Solvent
 - F. Container for cleaning parts
 - G. New gasket
- II. Procedures
 - A. Disconnect spark plug wire
 - B. Check breather for proper operation
 - C. Remove crankcase breather cover, if installed (Figure A)
 - D. Remove the crankcase breather, if it is not a part of the cover
 - E. Check breather valve for clearance (Figure B)
 - 1. Check reed valves with a feeler gauge
 - 2. Clearance should be .015" to .030"
 - F. Disassemble crankcase breather (Figure C)
 - G. Clean parts in petroleum solvent
 - H. Reassemble and install breather

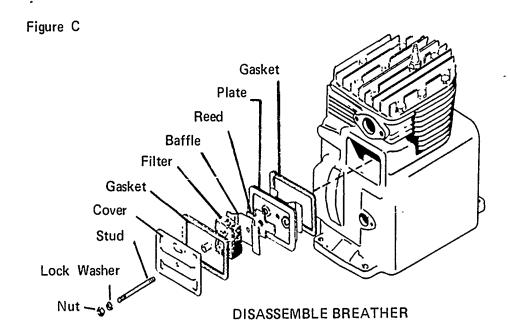

JOB SHEET #8

III. Diagram of procedure

SERVICING SMALL ENGINES UNIT II

JOB SHEET #9--CHANGE CRANKCASE OIL

- I. Tools and materials needed
 - A. Standard screwdriver 8"
 - B. Combination pliers
 - C. End wrenches 7/16", 1/2", 9/16", and 5/8"
 - D. Funnel
 - E. Oil as recommended
 - F. Container for old oil
 - G. Clean rags

II. Procedure

- A. Operate engine until it is thoroughly heated
- B. Stop engine and disconnect the spark plug wire
- C. Locate drain plug (Figure A)
 - 1. Bottom of oil sump
 - 2. Under oil sump
 - 3. Some drained through filler neck
- D. Clean dirt from around plug before removing plug
- E. Remove drain plug
- F. Allow crankcase to drain for approximately five minutes
- G. Replace drain plug
- H. Refill crankcase with new oil

(NOTE: Use type of oil recommended in the operator's manual.)

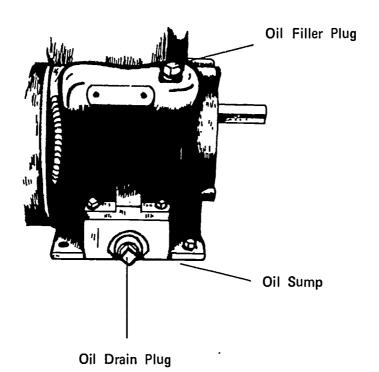

- I. Connect spark plug wire and start engine
- J. Check for oil leaks

JOB SHEET #9

- K. Stop engine
- L. Recheck oil level
- III. Diagram of procedure

Figure A

SERVICING SMALL ENGINES UNIT II

JOB SHEET #10--CHECK SPARK PLUG FOR PROPER OPERATION

- I. Tools and materials needed
 - A. Spark plug deep sockets 13/16" x 3/8" and 3/4" x 3/8" drive
 - B. Torque wrench handle 3/8" drive
 - C. Feeler gauge
 - D. Ignition file
 - E. Penknife
 - F. Wire brush
 - G. Small paint brush
 - H. Pan of petroleum solvent

II. Procedures

- A. Disconnect the spark plug wire from the spark plug (Figure A)
- B. Loosen plug one or two turns, and then remove dirt
- C. Remove the spark plug (Figure B)
- D. Reconnect the spark plug wire
- E. Ground spark plug to the engine (Figure C)
- F. Crank the engine one or two turns
- G. Observe the spark at the electrode

(NOTE: If there is no spark, or if spark is weak, proceed to next step.)

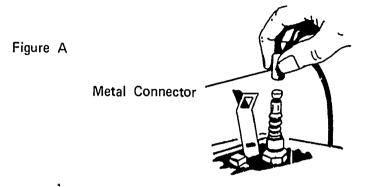

- H. Disconnect the spark plug wire from the spark plug
- I. Hold the end of the spark plug wire approximately 1/4 inch from the cylinder head, or use a spark tester (Figure D)
- J. Crank the engine one or two turns
- K. Observe the spark between spark plug wire and the cylinder head

(NOTE: If the spark is blue-orange color, the ignition system is okay; the trouble is in the spark plug.)

JOB SHEET #10

III. Diagram of procedure

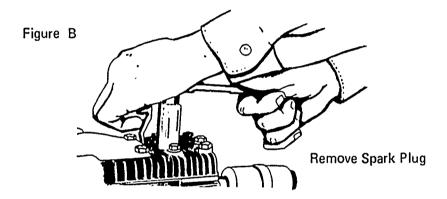

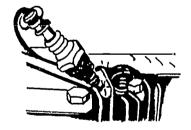

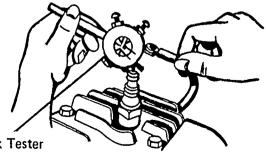

Figure C

Ground Spark Plug

Adjustable Gap Spark Tester

SERVICING SMALL ENGINES UNIT II

JOB SHEET #11-SERVICE SPARK PLUGS

- I. Tools and materials needed
 - A. Spark plug deep sockets 13/16" x 3/8" and 3/4" x 3/8" drive
 - B. Torque wrench handle 3/8" drive
 - C. Feeler gauge
 - D. Ignition file
 - E. Penknife
 - F. Wire brush
 - G. Small paint brush
 - H. Pan of petroleum solvent

Procedures

- A. Check the condition of the plugs
- B. Remove oily deposits from plugs
- C. Clean threads with wire brush

(NOTE: Do not brush the insulator. It will leave a metallic film which may provide an electrical short to ground.)

- D. Remove deposits from plugs (Figure A)
- E. Blow loose materials from plug with compressed air
- F. Bend the ground electrode enough to allow room for a thin point file (Figure B)

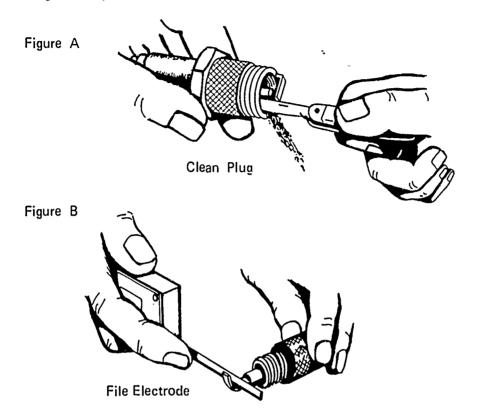

(NOTE: Bend just enough to allow room for file; too much bending will break the ground electrode.)

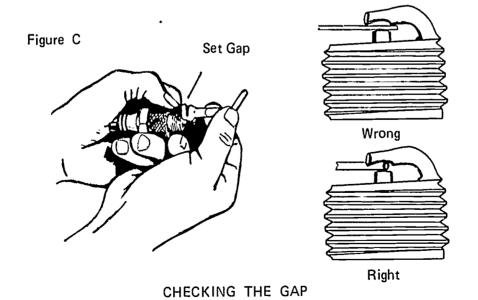

- G. File electrodes on plugs until both have flat surfaces (Figure B)
- H. Bend the ground electrode back into its original position
- Determine proper spark gap spacing for your engine (Figure C)
 - 1. Most plugs set on .025 inch
 - 2. Range from .020" to .040"

JOB SHEET #11

SERVICING SMALL ENGINES UNIT II

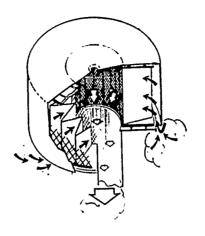

TEST

1.	Match the following terms with the correct definition.				
	a. A device located in the manifold which controls the fuel and air	1.	Air cleaner		
	b. A gate or valve which allows passage of gas or fluid in one direction only	2.	Butterfly valve		
		3.	Choke valve		
	c. The space between the electrodes of a spark plug through which the spark jumps	4.	Detonation or knock		
	spark jumps	5.	Spark gap		
	d. A hammering force on the piston rather than a uniform pushing force				
	e. A device for filtering, cleaning, and removing dust from the air admitted to a unit such as an engine				
2.	Name three solutions used in cleaning an engine.				
	a.				
	b.				
	C.				
31,	Identify the following types of air cleaners.				

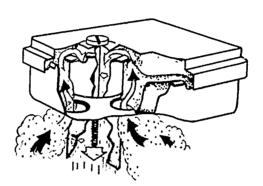

a._____

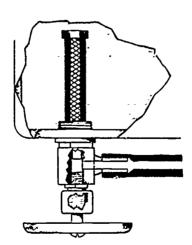

b.

c.___

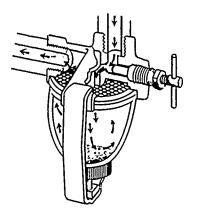

4. Identify the following types of fuel filters.

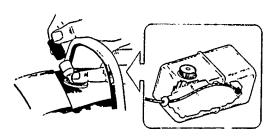

a.____

262

b._____

Identify the following types of carburetors.

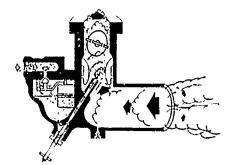

5.

a._____

b._____

C._____

- 6. Demonstrate the procedures for performing the following jobs.
 - a. Clean and inspect crankcase and accessories.
 - b. Clean and inspect cooling system.
 - c. Service air cleaners.
 - d. Service fuel filters.
 - e. Clean crankcase breather.
 - f. Change crankcase oil.
 - g. Check spark plug for proper operation.
 - h. Clean and service spark plugs.

(NOTE: If this has not been completed prior to the test, ask the instructor when the above activities should be completed.)

SERVICING SMALL ENGINES UNIT II

ANSWERS TO TEST

1.	a.	2

- b. 3
- c. 5
- d. 4
- e. 1
- 2. a. Commercial solvent
 - b. Petroleum solvents
 - c. Live steam
- 3. a. Oil-bath
 - b. Dry-filter
 - c. Oil-filter
- 4. a. Screen in fuel tank
 - b. Combination screen and sediment bowl
 - c. Screen at end of fuel pickup hose
- 5. a. Diaphragm
 - b. Suction-lift
 - c. Float
- 6. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to list sharpening equipment and discuss safety precautions to use in grinding. He should be able to sharpen and repair common shop tools. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. List three reasons for repairing and sharpening tools.
- 2. List four pieces of sharpening equipment.
- 3. Discuss three safety precautions to use in grinding.
- 4. Demonstrate the ability to:
 - a. Sharpen plane irons or wood chisels.
 - b. Sharpen a twist drill.
 - c. Reshape a cold chisel.
 - d. Dress a grinding wheel.
 - e. Fit a screwdriver.
 - f. Replace a hammer handle.

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Discuss terminal and specific objectives.
- D. Discuss information sheet.
- E. Demonstrate and discuss procedures outlined in job sheets.
- -F .- Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Job sheets
 - 1. Job Sheet #1--Sharpen Plane Irons or Wood Chisels
 - 2. Job Sheet #2--Sharpen a Twist Drill
 - 3. Job Sheet #3--Reshape a Cold Chisel
 - 4. Job Sheet #4--Dress a Grinding Wheel
 - 5. Job Sheet #5--Fit a Screwdriver
 - 6. Job Sheet #6--Replace a Hammer Handle

4 - F

- D. Test
- E. Answers to test

II. References:

- A. Phipps, Lloyd J. *Mechanics in Agriculture*. Danville, Illinois: Interstate Publishers, 1967.
- B. Jones, Mack M. Shopwork on the Farm. New York: McGraw-Hill Book Company, Inc., 1955.

INFORMATION SHEET

- I. Reasons for repairing and sharpening tools
 - A. Safety
 - B. Good workmanship
 - C. Save time
- II. Sharpening equipment
 - A. Bench grinder
 - B. Oilstone
 - C. Files
 - D. Vise
- III. Safety precautions in grinding
 - A. Protect eyes and face
 - 1. Wear goggles or a face shield
 - 2. Stand slightly to one side so that the face will not be in line with the grinding wheel
 - 3. Use wheel guards on high-speed power-driven grinders
 - B. Adjust work rests
 - 1. Set work rests as close to the wheel as possible without touching
 - 2. Too much space may allow the piece being ground to catch and wedge between the wheel and the rest
 - C. Adjust bearings
 - 1. Adjustable bearings should be kept tight and well lubricated
 - 2. Loose bearings allow vibration and cause inferior grinding

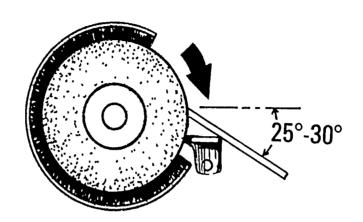

JOB SHEET #1-SHARPEN PLANE IRONS OR WOOD CHISELS

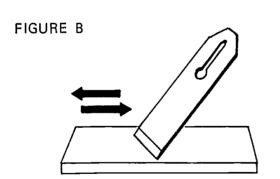

- I. Tools and equipment
 - A. Dull plane iron or wood chisel
 - B. Grinder
 - C. Oilstone
 - D. Oil
 - E. Container of water
- II. Procedure
 - A. Jointing the plane iron
 - 1. Place the iron on the grinder tool rest with the bevel pointing up
 - 2. Hold the iron on the grinder tool rest and touch it lightly against the wheel
 - 3. Move the iron from left to right against the grinder wheel until the nicks are removed
 - 4. Check the edge for squareness
 - B. Grinding the plane iron
 - 1. Grind the iron at 25° to 30° angles (Figure A)
 - 2. Grind the iron to an angle about 3/16" long
 - 3. Keep the iron perpendicular to the wheel face, and move the iron from side to side until a wire edge appears on the flat side
 - 4. Dip the iron in water often to keep it cool
 - C. Honing the plane iron or wood chisel
 - 1. Place a few drops of oil on the oilstone
 - 2. Place the flat side of the blade against the oilstone and move the blade back and forth until wire edge is removed (Figure B)

JOB SHEET #1

III. Diagram of the procedure FIGURE A

JOB SHEET #2--SHARPEN A TWIST DRILL

- I. Tools and equipment
 - A. Grinder
 - B. Twist drill
 - C. Container of water
- II. Procedure
 - A. Place the drill point against the grinding wheel at approximately a 59° angle (Figure A)
 - B. Using both hands, lower the shank, and raise the bit cutting point against the wheel (Figure B)
 - C. Rotate the bit in a clockwise manner while grinding
 - D. Grind both lips in the same manner
 - E. Dip the point in water frequently to keep it cool
- III. Diagram of the procedure

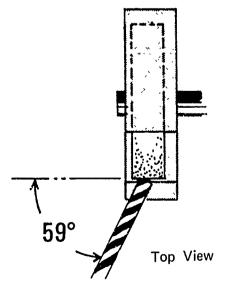

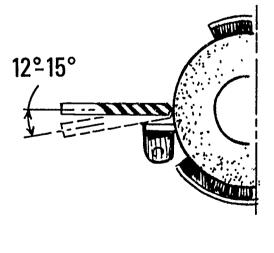

FIGURE B

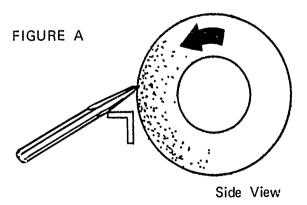

Side View

JOB SHEET #3-RESHAPE A COLD CHISEL

- I. Tools and equipment
 - A. Cold chisel
 - B. Grinder
 - C. Container of water
- II. Procedure
 - A. Hold the chisel at a 65° to 70° angle with the handle pointing down (Figure A)
 - B. Move the point from side to side across the grinding wheel (Figure B)
 - C. Grind both sides of the cutting edge in the same manner (Figure C)
 - D. Dip the point in water frequently to keep it cool
 - E. If the head has become mushroomed, it should be ground back into shape (Figure D)

III. Diagram of the procedure

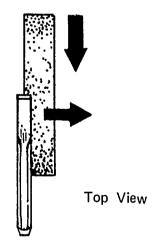

FIGURE C

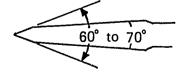

FIGURE D

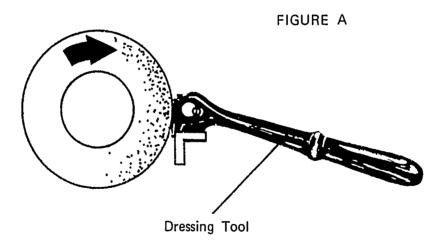

JOB SHEET #4-DRESS A GRINDING WHEEL

- I. Tools and equipment
 - A. Grinding wheel
 - B. Dressing tool
- II. Procedure
 - A. Select the proper dressing tool
 - B. Set the dressing tool on the grinder tool rest and press it firmly against the wheel

(NOTE: Use enough pressure on the tool to prevent sparks.)

- C. Dress the grinder wheel with the tool until the edges are square with the sides
- III. Diagram of the procedure

JOB SHEET #5--FIT A SCREWDRIVER

- I. Tools and equipment
 - A. Grinder
 - B. Screwdriver
 - C. Screw with head size equal to the width of the screwdriver's blade
 - D. Container of water

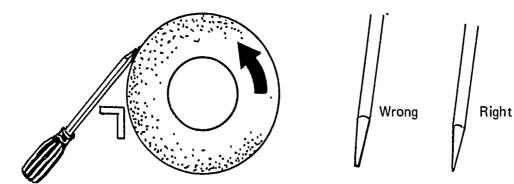

II. Procedures

- A. Place screwdriver against the grinder wheel at a 90° angle to square the tip
- B. Apply light pressure on blade, while grinding
- C. Shape both faces of screwdriver (Figure A)
- D. Use screw head to determine the extent of grinding desired(NOTE: Do not round or sharpen the end.) (Figure B)
- E. Dip point in water frequently to keep it cool

III. Diagram of the procedure

FIGURE A

JOB SHEET #6--REPLACE A HAMMER HANDLE

- I. Tools and equipment
 - A. Hammer with a broken handle
 - B. Hacksaw
 - C. Twist drill
 - D. Punch
 - E. Rasp
 - F. Handsaw
 - G. Soft faced hammer
 - H. Vise

(NOTE: Cover the jaws of the vise with sheet metal or use wood blocks to pretent damage to the hammer and handle.)

- I. New handle
- J. Small piece of wood for wedge

II. Procedure

- A. Place the hammer head in the vise
- B. Saw the broken handle close the hammer head with a backsaw (Figure A)
- C. Remove the wood from the eye by first drilling with a twist drill and then punching the remainder out (Figure B)
- D. Place the new handle in the vise
- E. Work the new handle down to size with a rasp, trying the handle in the head frequently (Figure C)
- F. With a handsaw make a cut across the long diameter of the top of the handle to a distance of about 2/3 the depth of the eye (Figure D)
- G. Drive the handle firmly into place using a soft faced hammer (Figure E)

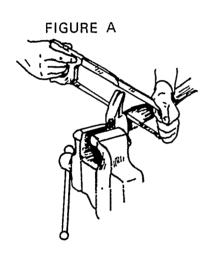

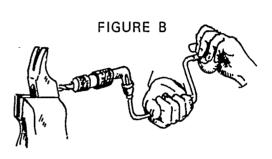

JOB SHEET #6

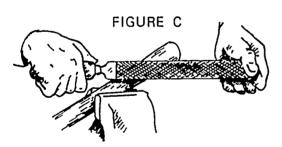

- H. Make a thin wooden wedge and drive it tightly into the cut in the end of the handle
- I. Place the hammer in the vise and use a hacksaw to cut off the handle and wedge extending through the head (Figure F)

(NOTE: If steel wedges are used, the end of the handle need not be cut across the diameter, as the wedge can be driven into place after the handle has been cut off even with the head.)

III. Diagram of procedure

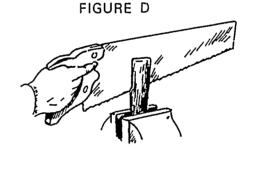

FIGURE F

TEST

i.	List three reasons for repairing and sharpening tools.
	a.
	b.
	c.
2.	List four pieces of sharpening equipment.
	a.
	b. **
	c.
	d.
3.	Discuss three safety precautions to use in grinding.
	a.

b.

c.

- 4. Demonstrate the ability to:
 - a. Sharpen plane irons or wood chisels.
 - b. Sharpen a twist drill.
 - c. Reshape a cold chisel.
 - d. Dress a grinding wheel.
 - e. Fit a screwdriver.
 - f. Replace a harmer handle.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

ANSWERS TO TEST

- 1. a. Safety
 - b. Good workmanship
 - c. Save time
- 2. a. Benca grinder
 - b. Oilstone
 - c. Files
 - d. Vise
- 3. The answer should include these points:
 - a. Protect eyes and face
 - 1) Wear goggles or a face shield
 - 2) Stand slightly to one side so that the face will not be in line with the grinding wheel
 - 3) Use wheel guards on high-speed power-driven grinders
 - b. Adjust work rests
 - 1) Set work rests as close to the wheel as possible without touching
 - 2) Too much space may allow the piece being ground to catch and wedge between the wheel and the rest
 - c. Adjust bearings
 - 1) Adjustable bearings should be kept tight and well lubricated
 - 2) Loose bearings allow vibration and cause inferior grinding
- 4. Performance skills will be evaluated to the satisfaction of the instructor.

1.00

METAL WORK UNIT II

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to match chisels and threading tools with correct uses, discuss the steps in cutting metal with a hacksaw, and name methods for bending cold metal. He should be able to cut metal with a cold chisel, drill holes with a drill press, and thread nuts and bolts. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match the name of a metal work tool with the correct tool.
- 2. Match four types of chisels with the correct use of each.
- 3. Match six threading tools with the correct use of each.
- 4. Discuss the steps in cutting metal with a hacksaw.
- 5. Name three methods for bending cold metal.
- 6. Demonstrate the ability to:
 - a. Cut flat metal with a cold chisel.
 - b. Drill holes with a drill press.
 - c. Thread a nut.
 - d. Thread a bolt.

18

METAL WORK - UNIT II

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information and job sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedures outlined in job sheets.
- G. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1--Metal Measuring Tools
 - 2. TM 2 · Metal Marking Tools
 - 3. TM 3--Metal Cutting Tools

- 4. TM 4--Cold Chisels
- 5. TM 5--Threading Tools
- 6. TM 6--Cutting Cold Metal With a Hacksaw
- 7. TM 7--Bending and Shaping Metal

D. Job sheets

- 1. Job Sheet #1--Cut Flat Metal With a Cold Chisel
- 2. Job Sheet #2-Drill Holes With a Drill Press
- 3. Job Sheet #3--Thread a Nut
- 4. Job Sheet #4--Thread a Bolt
- E. Test
- F. Answers to test

METAL WORK UNIT II

INFORMATION SHEET

- I. Metal work tools.
 - A. Measuring tools (Transparency 1)
 - 1. Steel rule
 - 2. Combination square
 - 3. Steel tape
 - 4. Micrometer

(NOTE: This is used when a high degree of accuracy is necessary.)

- 5. Dividers
- 6. Calipers
- B. Marking tools (Transparency 2)
 - 1. Scratch awl
 - 2. Scriber
 - 3. Center punch
 - 4. Flat file
- C. Cutting tools (Transparency 3)
 - 1. Hacksaw
 - 2. Bolt cutter
 - 3. Cold chisel
 - 4. Metal shears
- II. Types and uses of cold chisels (Transparency 4)
 - A. Standard flat--Used to cut sheet metal, bolts, nuts, rivets, and rods (NOTE. This is the most common chisel.)
 - Diamond point--Used for cutting triangular grooves or for marking square corners in grooves

INFORMATION SHEET

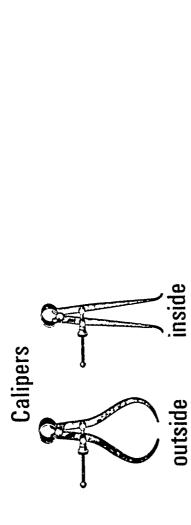

- C. Cape--Used to cut rectangular grooves or channels
- D. Round nose--Used for cutting oval grooves or channels
- III. Tools for threading bolts and nuts (Transparency 5)
 - Taps--Used for cutting threads in nuts or on the inside of holes drilled in metal
 - 1. Taper tap--Used to start all threads and may be used to complete the operation when the tap can be run entirely through the piece of metal
 - 2. Plug tap--Used when one end of the hole is closed
 - 3. Bottoming tap--Used when it is necessary to cut a full thread to the bottom of the hole

(NOTE: Plug or bottoming taps should not be used to start a thread.)

- B. Dies--Used for cutting threads on bolts
- C. Die stock--Used for holding dies in position while cutting a thread
- D. Tap wrench--Used to turn the tap while cutting a thread
- IV. Steps in cutting metal with a hacksaw (Transparency 6) .
 - A. Mark the point
 - B. Place metal in vise
 - C. Notch the mark with a file
 - D. Cut
 - 1. Use long strokes
 - 2. Apply pressure on forward stroke
 - 3. Reduce pressure on backward stroke
 - 4. Use 40.60 strokes per minute
- V. Methods for bending cold metal (Transparency 7)
 - A. Use a hammer and an anvil
 - B. Use a hammer and a vise
 - C. Use a metal bending fork and a vise
 - D. Use a piece of pipe, a rod, and a vise
 - E. Use a vise and a wrench to twist square rod

METAL WORK UNIT II

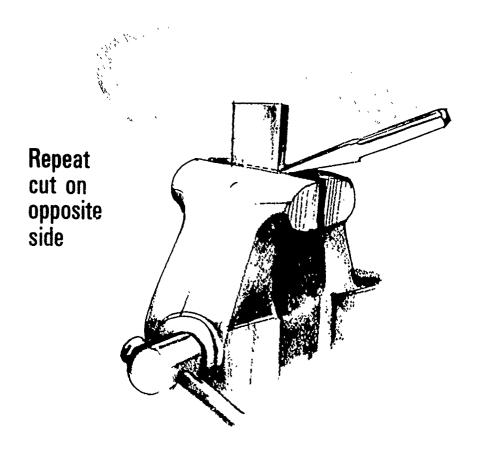

JOB SHEET #1--CUT FLAT METAL WITH A COLD CHISEL

- I. Tools and equipment
 - A. Marker (oval, chalk, etc.)
 - B. Flat strip of metal
 - C. Chisel
 - D. Hammer
 - E. Vise
 - F. Safety goggles
- II. Procedure
 - A. Mark the metal
 - B. Place the metal in the vise with the cutting mark just above the jaws of the vise
 - C. Select proper size chisel and hammer (For larger size metal, use a larger chisel and hammer.)
 - D. Place the chisel at side of the metal to start the shearing point (Drive the chisel with a hammer.)
 - E. Hold the chisel at approximately a 60° angle
 - F. Make cuts from each end of the metal to the center and on both sides
 - G. Bend metal back and forth until it breaks

JOB SHEET #1

III. Diagram of the procedure

METAL WORK UNIT II

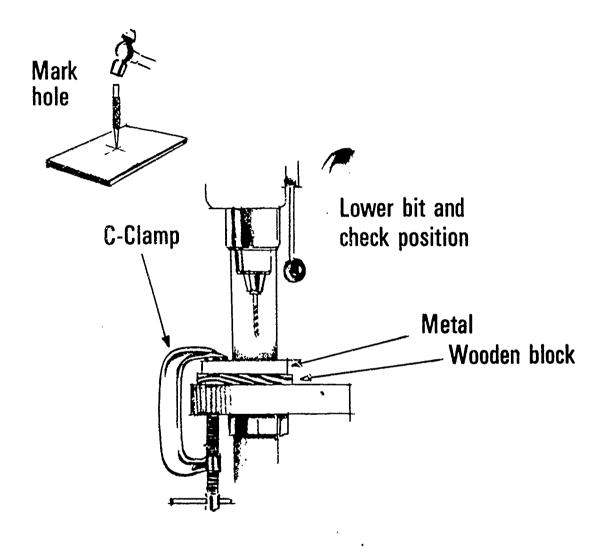

JOB SHEET #2-DRILL HOLES WITH A DRILL PRESS

- I. Tools and equipment
 - A. Small piece of flat metal
 - B. Drill press
 - C. Center punch
 - D. Hammer
 - E. Wooden block
 - F. Cutting oil
 - G. Clamp
 - H. Safety goggles
- II. Procedure
 - A. Mark the hole with a center punch
 - B. Place the metal on a wooden block
 - C. Clamp the metal being drilled securely to prevent it from spinning
 - D. Feed the bit down to the metal and start drilling
 - E. Raise the bit to see if you are drilling in the proper place
 - F. Continue drilling, using cutting oil on the drill bit two or three inches above the work

JOB SHEET #2

II. Diagram of the procedure

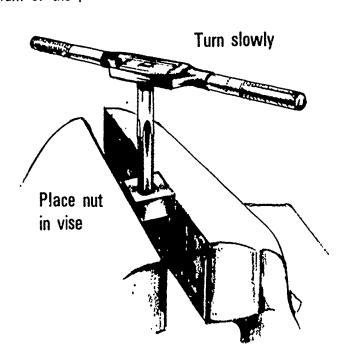

METAL WORK UNIT II

JOB SHEET #3--THREAD A NUT

- I. Tools and equipment
 - A. Nut with a hole bored through it
 - B. Vise
 - C. Tap
 - D. Cutting oil
- II. Procedure
 - A. Place nut in a vise firmly, but do not overtighten
 - B. Select proper tap
 - C. Place tap up and down over hole and turn tap slowly
 - D. Apply cutting oil
 - E. Remove tap by turning to the left when threads are completed

III. Diagram of the procedure

METAL WORK-UNIT II

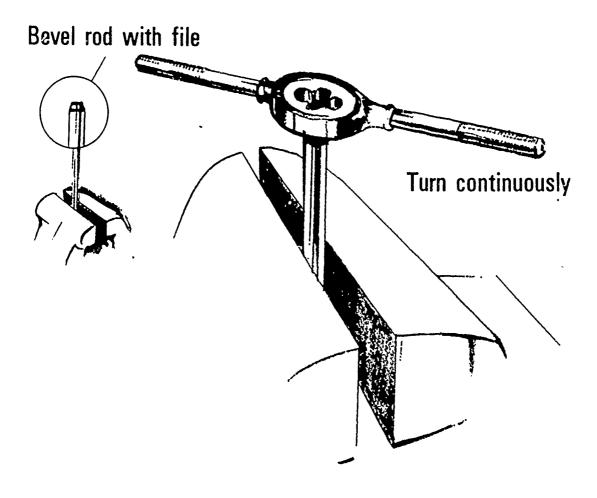

JOB SHEET #4--THREAD A BOLT

- I. Tools and equipment
 - A. Short piece of rod to be used as a bolt
 - B. Flat file
 - C. Die
 - D. Vise
 - E. Cutting oil
 - F. Wire brush
- II. Procedure
 - A. Place rod in a perpendicular position in the vise
 - B. Bevel the end to be threaded
 - C. Select proper size of die and handle
 - D. Place the die squarely on the bolt
 - E. Apply cutting oil
 - F. Turn continuously in one direction until finished
 - G. Remove the die by turning it to the left

JOB SHEET #4

- 4. Discussion should include these points:
 - a. Mark the point
 - b. Place metal in vise
 - c. Notch the mark with a file
 - d. Cut
 - 1) Use long strokes
 - 2) Apply pressure on forward stroke
 - 3) Reduce pressure on backward stroke
 - 4) Use 40-60 strokes per minute
- 5. Any three of the following:
 - a. Use a hammer and an anvil
 - b. Use a hammer and a vise
 - c. Use a metal bending fork and a vise
 - d. Use a piece of pipe, a rod, and a vise
 - e. Use a vise and a wrench to twist square rod
- 6. Performance skills will be evaluated to the satisfaction of the instructor.

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to identify the types of solder, name fluxes, and identify soldering devices. He should be able to name safety rules for soldering and demonstrate the ability to tin a soldering iron and solder a lap joint. This knowledge will be evidenced through demonstration and by scoring eighty five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

- 1. Match six terms and definitions associated with soldering.
- 2. Identify three types of solder.
- 3. Name three fluxes.
- 4. Identify five soldering devices.
- 5. Name four safety rules to follow when soldering.
- 6. Demonstrate the ability to:
 - a. Tin a soldering iron.
 - b. Solder a lap joint.
 - c. Sweat solder a lap joint.

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide students with objective sheet.
 - B. Provide students with information and job sheets.
 - C. Discuss terminal and specific objectives.
 - D. Discuss information sheet.
 - E. Demonstrate and discuss procedures outlined in job sheets.

١,

- F. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 - 1. TM 1--Types of Solder
 - 2. TM 2--Soldering Devices
 - D. Job sheets

INFORMATION SHEET

- I. Terms and definitions
 - A. Solder--A metal alloy commonly made up of tin and lead
 - B. Soldering--The process of uniting two pieces of metal by means of a metal alloy having a lower melting point than the metals to be joined
 - C. Flux--The substance used to clean the surface to be soldered or tinned
 - D. Soldering iron--The device used for melting and applying the solder
 - E. Tinning-The coating of the four faces of the soldering iron with solder
 - F. Sweat soldering--A process where heat is applied to the pieces to be joined and the solder is melted
- II. Types of solder (Transparency 1) .
 - A. Solid wire
 - B. Acid or rosin core wire
 - C. Bar
- III. Fluxes
 - A. Zinc chloride
 - B. Rosin
 - C. Muriatic acid
 - D. Sal ammoniac
- IV. Soldering devices (Transparency 2)
 - A. Non-electric soldering iron (soldering copper)
 - B. Electric soldering iron
 - C. Electric soldering gun
 - D. Gas torch
 - E. Welder

(NOTE: Short carbon against the metal to heat the area for soldering.)

¥ 1

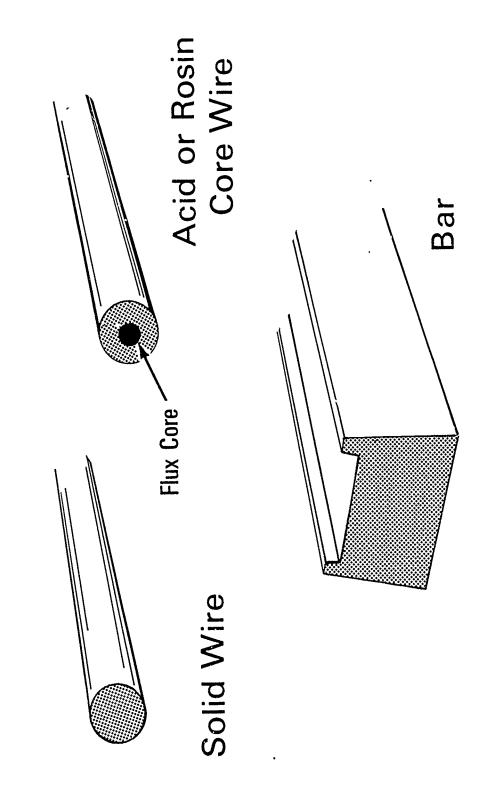

INFORMATION SHEET

V. Safety rules

- A. Store soldering iron carefully after use as improper storage can result in serious burns or a fire
- B. Wash hands thoroughly after using soft solder
- C. Protect eyes from splattering solder and flux
- D. Have cuts and burns treated promptly
- E. Tin the soldering iron in a well-ventilated area
- F. Do not touch joints that have just been soldered

Types of Solder

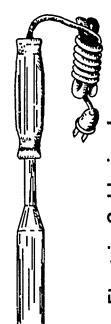

Soldering Devices

Non-Electric Soldering Iron (Soldering Copper)

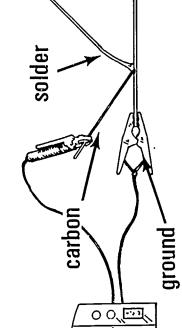

Electric Soldering Iron

Gas Torch

Electric Soldering Gun

00 111

Welder with Carbon

JOB SHEET #1-TIN A SOLDERING IRON

- I. Tools and equipment
 - A. Soldering iron
 - B. File

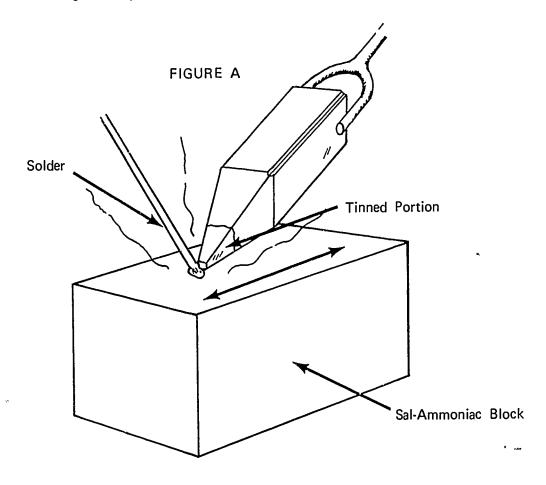

, , , , , , ,

- C. Zinc chloride or sal ammoniac or powdered rosin
- D. Solder
- E. Gas furnace or torch (if a non-electric iron is being used)
- F. Clean cloth
- II. Procedures
- (NOTE: This is necessary for removing rough spots from copper.)
 - B. Heat the iron until it will melt solder
 - C. Continue with one of the following three ways depending on materials available
 - 1. Zinc chloride
 - a. Dip point quickly into and out of a jar zinc chloride
 - b. Melt solder on the faces
 - c. Wipe with a clean cloth to remove excess solder
 - 2. Sal ammoniac
 - a. Drop a few drops of solder on the sal ammoniac block
 - b. Rub the tip in the drops on the block
 - c. Remove excess solder by wiping the tip with a clean cloth
 - 3. Rosin
 - a. Rub the tip in powdered rosin
 - b. Dip the tip in solder
 - c. Wipe with a clean cloth to remove excess solder

JOB SHEET #1

III. Diagram of procedure

Tinning a Soldering Iron on a Sal-Ammoniac Block.

JOB SHEET #2-SOLDER A LAP JOINT

- I. Tools and equipment
 - A. Soldering iron
 - B. Solder
 - C. Flux
 - D. File
 - E. Water
- II. Materials-Two pieces of sheet metal 2" x 6"
- III. Procedures
 - A. Clean the area to be soldered
 - B. Apply flux (Figure A)
 - C. Clean, heat, and tin the soldering iron

(NOTE: Never let it become red hot.)

D. Hold the seam together and tack it with small amounts of solder at several points (Figure B)

(NOTE: Apply the solder directly in front of the soldering iron tip rather than on it.)

E. Return to the starting point; with the soldering iron flat on the work and with the seam pressed together with a file tang, start moving the soldering iron slowly toward the end of the joint as soon as the solder melts and begins to flow (Figures C and D)

(NOTE: As the soldering iron advances, follow it with the file tang as soon as the solder hardens.)

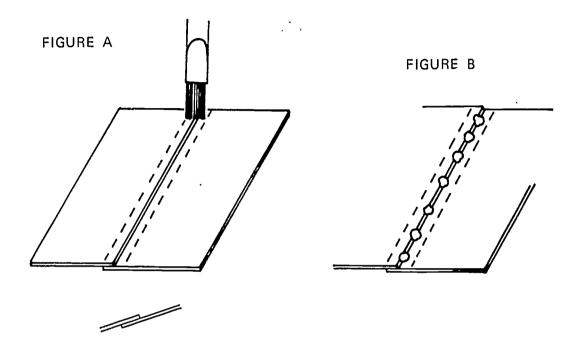

F. Clean the seam with water

(NOTE: This only needs to be done if an acid flux such as zinc chloride, sal ammoniac, or other acid is used. The joint and the metal touched by the flux will turn black if this is not done.)

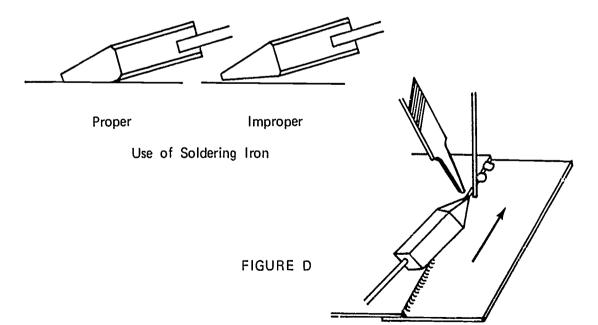

JOB SHEET #2

IV. Diagram of procedure

. FIGURE C

JOB SHEET #3--SWEAT SOLDER A LAP JOINT

- 1. Tools and equipment
 - A. Soldering iron
 - B. Solder
 - C. Flux
 - D. Clamps
- II. Materials--Two pieces of sheet metal 2" x 6"
- III. Procedure
 - A. Clean the surfaces of metal
 - B. Apply flux
 - C. Coat each surface with a thin layer or coating of solder
 - D. Clamp the prepared pieces together
 - E. Apply heat until the solder melts and joins the pieces together

(NOTE: Sweat soldering is done when two or more pieces must be joined and no solder is to be seen after the soldering is completed.)

TEST

1.	Match these terms with the correct definition.			
	a. A metal alloy commonly made		1.	Flux
	b. The piec of a low	The process of uniting two pieces of metal by means of a metal alloy having a lower melting point than the metals to be joined	2.	Solder
			3.	Soldering
			4.	Soldering iron
			5.	Sweat soldering
	c. The substance used to clean the surface to be soldered or tinned		6.	Tinning
	d. T	The device used for melting and applying the solder		
	f	The coating of the four aces of the soldering iron with solder		
	 a j	A process where heat is applied to the pieces to be oined and the solder is melted		
2.	Identify th	nese types of solder.		
a		b	(o,

3.	Name three fluxes:
	a.
	b.
	c
4.	Identify these soldering devices."
	a b
c	d
	e
5.	Name four safety rules to follow when soldering.
	a. ·
	b.
	c.
	d.
6.	Demonstrate the ability to:
	a. Tin a soldering iron.
	b. Solder a lap joint.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

Sweat solder a lap joint.

ANSWERS TO TEST

- 1. a. 2
 - b. 3
 - c. 1
 - d. 4
 - e. 6
 - f. 5
- 2. a. Bar
 - b. Solid wire
 - c. Acid or rosin core wire
- 3. Any three of the following:
 - a. Zinc chloride
 - b. Rosin
 - c. Muriatic acid
 - d. Sal ammoniac
- 4. a. Electric soldering gun
 - b. Welder
 - c. Gas torch
 - d. Electric soldering iron
 - e. Non-electric soldering iron (soldering copper)
- 5. Any four of the following:
 - a. Store soldering iron carefully after use as improper storage can result in serious burns or a fire
 - b. Wash hands thoroughly after using soft solder

- c. Protect eyes from splattering solder and flux
- d. Have cuts and burns treated promptly
- e. Tin the soldering iron in a well-ventilated area
- f. Do not touch joints that have just been soldered
- 6. Performance skills will be evaluated to the satisfaction of the instructor.
